## **INTRODUCTION**

These are the codebooks for the Professional Partner Program data files, which have been aggregated to the statewide level. This codebook reflects changes proposed as of September 1, 2011. It fixes noted inconsistencies, duplicate field names, misspellings, and other areas targeted for improvement, as well as adds new fields that have been requested.

Structure: The layout of the Statewide Professional Partner Program data tables is organized in the following manner. For each table, the following information is given:

1. Variable Name: The variable number or name assigned to each variable in the database.
2. Variable Description: The variable description or question to identify the variable.
3. Format: The variable format type (Numeric, String, Date, etc.). These are MS Access field types.
4. Valid Codes/Range: The meanings of code values and/ or the valid numerical range for this variable in the dataset.

Missing Data: For complete data, each field must have a value. If a field does not apply or was not collected, a value to specify the reason why the data is missing must be given. The following codes indicate missing data types for all PPP tables:

- 6666 = NOT APPLICABLE
- 7777 = REFUSED
- 8888 = DON'T KNOW
- 9999 = MISSING

Field lengths are not given and are up to each Region to set. They should be set at an appropriate length for the use of the field, and short enough to maintain a small database size.
