Nebraska Refugee Health Program

NEBRASKA REFUGEE HEALTH SCREENING PROCEDURES

I. INTRODUCTION

Under the Refugee Act, Section 412 (b)(5), the Office of Refugee Resettlement (ORR) is responsible for the provision of medical screening and initial medical treatment to all arriving refugees. In Nebraska, the refugee health screening process is administered by the Nebraska Department of Health and Human Services (Nebraska DHHS), Division of Children and Families and the Division of Public Health.

Nebraska DHHS has the authority to plan, develop programs, and make rules and regulations pertaining to refugee resettlement programs. The department has the responsibility to ensure that refugee medical screening will be made available to refugees in accordance with the regulations established by the federal Office of Refugee Resettlement (ORR), and the requirements detailed in ORR State Letter # 04-10 and 45 Code of Federal Regulation (CFR) Part 400.107. The Nebraska DHHS Division of Families and Children participate in a memorandum of understanding (MOU) with the Nebraska DHHS Division of Public Health, to enter, manage and evaluate the data from refugee health screening.

Health screening is the refugee’s introduction to the U.S. health care system. It also represents an opportunity for referral to appropriate continuing care. Health education and patient information about local community health resources are made available in the native languages of refugees.

The refugee health screening program is designed to:

- Ensure follow-up of refugees with conditions identified during the overseas medical exam.
- Evaluate current health status and identify health problems not identified during, or developed subsequent to, the overseas exam (which may have been performed up to one year prior to departure for the U.S.)
- Ensure refugees are referred for follow-up to specialty and primary care, as indicated.
- Identify conditions with a potential to adversely impact effective resettlement.
- Initiate appropriate immunizations which includes childhood immunizations and immunizations required for all refugees to adjust status to become lawful permanent residents of the U.S.

Components to the U.S. Refugee Health Screening protocol include:
1. **Overseas Visa Medical Examination**

Refugees resettling in the U.S. must receive an overseas visa medical examination prior to departure for the U.S. The overseas exam is the same for refugees worldwide. The components are specified by federal regulations. The purpose of the overseas exam is to identify refugees with medical conditions or psychological disorders that may be a danger to themselves or the general population, which, by law, would exclude them from entry into the U.S. Conditions identified during the overseas exam requiring follow up in the U.S. are designated Class A or Class B.

- A refugee with an excludable condition (Class A) must apply for a waiver to enter the U.S. A condition of the waiver generally includes assurance that necessary medical services will be provided following entry into the U.S.
- Class B conditions do not require a waiver, but do require follow-up medical care on arrival in the U.S.

The overseas exam only provides baseline medical information. It does not allow for supplemental testing for refugees arriving from areas of the world where certain diseases may be endemic or epidemic. Many refugees come from areas where disease control, diagnosis and treatment have been lacking and/or the health care system and public health infrastructure have been interrupted for several years. Because the overseas exam may be completed up to one year before departure, the refugee may develop a communicable disease or other health condition after examination, but before arriving in the U.S.

2. **Domestic Health Screening**

The domestic refugee health screening differs significantly from the overseas exam. While the overseas examination is intended to identify medical conditions that will exclude an applicant from entering the U.S., the domestic health screening is designed to eliminate health-related barriers which may affect successful resettlement. Such screenings are also protective of the health of the U.S. population. The following are key points of information regarding this screening program:

- All newly arriving refugees are eligible for a federally funded Refugee Medical Assistance (RMA) health screening examination.
- The contractor needs to make the utmost effort to initiate the refugee health assessment package within 30 days and complete the health assessment within 90 days of entry into the U.S. in order for the refugee to access these no cost services and for the provider to be reimbursed by RMA funds through the Nebraska DHHS Refugee Health Program.
- Asylees, parolees, and victims of human trafficking are also eligible for the refugee health screening when initiated within 90 days of their certification.
- Complete the Health Screening Assessment (page 26-30) for each refugee, collect data on services provided and submit the information to the Refugee Health Coordinator. Verify that only those secondary migrants that did not receive a health screening in their original state of arrival and are within 90 days of arrival receive a health screening and the package rate.
- Provide the Health Screening Assessment within 30 days of arrival and as recommended on the IOM for 100% of refugees with serious medical conditions.
- Conduct oversight to assure that the agency is not billing Medicaid or any other source for the same refugee service as provided in the refugee health screening protocol.
- Bill for services covered within the first 90 days according to the procedures found on page 4.
• Bill Medicaid for Medicaid covered services after the first 90 days.
• Have a Civil Surgeon sign USCIS form 693 (Report of Medical Examination and Vaccination Record) needed for refugees to acquire Lawful Permanent Resident status without an additional charge to those refugees receiving services through a package rate.
• Complete the Report of Medical Examination and Vaccination Report (Form I-693) and include them as part of the package of service as described in the Attachment D (Nebraska Refugee Health Screening Program). Only a civil surgeon designated by the United States Citizenship and Immigration Services (USCIS) to conduct medical examinations or a health department that has been given a blanket waiver may complete the Form I-693 and the vaccination supplement submitted with it.
• Ensure staff is trained on the Health Screening Procedures and on billing requirements for the program.
• Provide reports to the Department as found on page 4.
• Partner with the referring Voluntary Agency (VOLAG) and determine each individual’s eligibility. To be eligible for a refugee health screening, proof is required in the form of documentation issued to an individual by the U.S. Citizenship and Immigration Services (USCIS). The documentation must establish one of the following statuses:
  o Paroled as a refugee or asylee under section 212 (d) (5) of the Immigration and Nationality Act (INA).
  o Admitted as a refugee under section 207 of the INA.
  o Granted political asylum under section 208 of the INA.
  o Granted parole status as a Cuban/Haitian Entrant, in accordance with the requirements in 45CFR Section 401.2.
  o Certain Amerasians from Vietnam.
  The documentation must also establish the date of arrival into the United States.
• Conduct the entire health screening assessment and provide initial vaccinations at a single location to provide ease of services to refugees, help reduce costs, and maximize the Refugee Medical Assistance (RMA) funding for health screening. See Nebraska Refugee Health Screening Instructions on page 14-18 for more details. Refugees may not start screening at one site and finish at another. Screening sites are the Alegent-Crieghten Florence Clinic in Omaha, Lincoln Lancaster County Health Department in Lincoln and Central District Health Department in Grand Island (vaccines only for 90 day-8 month arrivals).
• The fullest extent possible, ensure ease of service for follow-up vaccinations. Continuity of care for the refugee will also be taken into consideration.
• Arrange or establish referrals for services that are needed but are not covered in the initial health exam. The health screening focuses on screening for communicable disease and conditions that may prevent the refugee from a successful resettlement.
• Comply with the Health Insurance Portability and Accountability Act of 1996 (HIPAA) Privacy Rule.
• Report State reportable health conditions for communicable disease to the local health authority (local health department) per Title 173. (http://www.dhhs.ne.gov/reg/t173.htm).
• Utilize the “Vaccines for Children Program” for all children 18 and under who need vaccines.
Reports

The Contractor will provide trimester reports containing:
- The number of refugees completing the health screening in 30 days from arrival.
- The number of refugees completing the health screening 31-90 days from arrival.
- The number of refugees not screened in 90 days.
- The number of refugees completing the vaccinations in a given trimester.
- The number of refugees receiving the Civil Surgeon’s signature.
- Reasons for refugees not being screened.
- Number of adult refugees referred to primary care, mental health services, dental care, vision care, and disability services.
- Number of refugees with High Public Concern Services (i.e. infectious diseases, HIV, suicide, etc.).
- Number of children (under 18 referred to primary care).
- List of top five health issues for all referrals (adults and children).

Reports will be submitted according to the following schedule:
- June 1, 2013 – September 30, 2013 due October 15, 2013

The health provider must be a licensed physician, hospital, community health center, county health department or clinic. The Nebraska DHHS Refugee Health Screening Program contracts with qualified local county and city health departments or other health care providers to provide refugees with health screening.

Billing

It is expected billing will occur on at least a quarterly basis and coincide with the trimester reports.

- June 1, 2013 – September 30, 2013 due October 15, 2013

Clinics must utilize Attachment A for billing if performing the package rate. Health billing may occur more frequently if the clinic prefers to do so. If the site is just doing vaccinations, the above timetables would be the same utilizing Attachment F.

Vaccines

- Vaccinations may be purchased in the first 90 days and utilized until the end of the vaccination series or within 12 months of the refugee’s first arrival date in the U.S.
- Vaccines only may be provided for refugees who are within 90 days to 8 months not to exceed $600 per the reimbursement rates on Attachment E. Medical Interpretation will not be reimbursed for the 90 day-8 month refugees. The provider needs to determine if the refugee has Medicaid managed care. If so, then the refugee should be referred to a Medicaid managed care provider. If not and the refugee is within 90 days to 8 months in the U.S, then the vaccines on Attachment E should be offered. Refugees must complete the health screening at a single location screening site. This should be
confirmed by asking the refugee. Refugees qualify for either the “package” or 90 day-8 month vaccination services but not both.

Language Barriers

- If the refugee does not speak English, all the services must be provided using qualified multilingual and multicultural medical interpreters.
- Since Nebraska does not license interpreters, the clinical site will make the judgment if an interpreter is qualified

Health screening services must be coordinated with reception and placement services provided by voluntary resettlement agencies (VOLAGs). VOLAGs are responsible for providing refugees with resettlement assistance upon their entry into the U.S. The assistance includes referral services, e.g., health, employment, and education. VOLAGs assist refugees in obtaining the initial health screening.

If clinics encounter problems with the VOLAGS such as no show clients, or refugees not completing their initial health screening, they should notify the state refugee health coordinator. It is a requirement of the VOLAG to ensure the refugee completes the health screening.

Providers involved in the initial screening of refugees should have an understanding of, and be sensitive to, the psychological trauma refugees may have experienced in the migration process. It is essential providers understand that refugees may have been subjected to multiple stressors before migrating, while in flight, and, in many cases, during a temporary resettlement period prior to their arrival in the U.S. Although these stressors may have a long-term negative impact on effective resettlement for some individuals, the treatment of mental health needs of refugees should not be the focus of the initial screening encounter. The initial screening process can, however, serve as an opportunity for providers to discuss with refugees the potential psychosocial difficulties they may experience during resettlement, and to refer refugees with identified mental health concerns to trained experts for evaluation and treatment.

PLEASE NOTE: Continuing long-term health care is not a part of the screening service.

Nebraska Refugee Health Screening Process

1. Refugees enter the U.S. through the Quarantine Station/Centers for Disease Control (CDC) and Prevention.

2. CDC notifies the Nebraska Department of Health and Human Services or the refugee health clinic or local health department through the Electronic Disease Notification (EDN) when a refugee initially resettles in Nebraska.

3. The Nebraska Refugee Health Program or local health clinic or local health department reviews the refugee health record accessed from EDN before the initial appointment with the health care provider.

4. If the refugee is classified with a TB Class B condition, the local health department is notified regarding the Class B status via EDN. If the refugee is listed as being HIV positive, then the clinic should notify the local health department or state HIV Surveillance area.
5. Primary health care providers or local county health department clinic perform initial Nebraska Initial Refugee Health Assessment.

6. The primary health care clinic or local county health department submits completed assessment and reporting forms to Nebraska Department of Health and Human Services.

7. Nebraska Department of Health and Human Services or local refugee clinic or local health department submits TB follow up information to CDC via EDN.

8. Nebraska Department of Health and Human Services reviews data on forms for quality assurance.

II. ELIGIBILITY OF REFUGEES FOR HEALTH SCREENING PROGRAM

The provider, in partnership with the referring VOLAG, will determine each individual’s eligibility for services. To be eligible for a refugee health screening, proof is required in the form of documentation issued to an individual by the U.S. Citizenship and Immigration Services (USCIS). The documentation must establish one of the following statuses:

a) Paroled as a refugee or asylee under section 212 (d) (5) of the Immigration and Nationality Act (INA).

b) Admitted as a refugee under section 207 of the INA.

c) Granted political asylum under section 208 of the INA.

d) Granted parole status as a Cuban/Haitian Entrant, in accordance with the requirements in 45CFR Section 401.2.

e) Certain Amerasians from Vietnam.

SECONDARY MIGRANTS:

Providers must determine the eligibility of secondary migrants. The provider should also verify through EDN or contact the State the secondary migrant originally arrived in to determine what services were received in the original state of arrival. Secondary migrants are only eligible for the health screening package if they are within 90 days of arrival and did not complete a health screening in their state of arrival.

Those secondary migrants that arrived in Nebraska after the 90 day arrival time frame and are not eligible for vaccinations through Medicaid or the Children's Program, are eligible to receive the vaccinations outlined in section Attachment F. These services will be reimbursed on a fee for service basis not the package rate on Attachment F. Refugees are eligible from 90 days to 8 months to receive these vaccinations. Refugees must not have started refugee medical assistance services elsewhere in Nebraska.

It is expected all vaccinations given will be documented in NESIIS.
Treatment Priorities

Priority is given to those persons with medical conditions identified during the overseas medical examination (Class A and B arrivals). These patients should receive health assessments within 30 days of entry and as recommended on the IOM. Providers should coordinate care of Class A and B conditions with local health departments.

It is understandable not to meet the 30 days if refugees fall into categories which will not allow them to be seen within 30 days (live virus vaccine given right before overseas departure).

All reportable disease found during the initial refugee health assessment must be reported to the local health authority per Nebraska state statute (i.e. suspected active TB, HIV, etc.)

The second priority group is those refugees who are single or couples without children and not aged and disabled. The contractor should to the maximum extent possible schedule at least the first appointment with this group in the first 30 days after arrival and strive to complete the health assessment in the first 30 days whenever possible.

Reimbursement Time Frame

A. Providers will receive rates as described in the contract for refugees screened within 90 days of entry into the U.S.

1. The domestic health assessment should be initiated within 30 days of the refugee's entry into the U.S. and completed within 90 days of arrival. (An asylee's entry date is the date the asylee is granted asylum in the U.S.)
2. The package rates will be billed at 85% once the physical exam process has been completed within 90 days. This fee is contingent upon refugees being seen for the exam within 90 days of arrival to the U.S. The screening exam must be complete.
3. To encourage the provider to follow through on immunizations, the remaining 15% will be billed at the time immunizations are completed.
4. If a patient is unable to be located, or reached to complete the vaccination series then the final 15% will not be paid.
5. Fee for service (90 days to 8 month arrivals) will be paid upon receipt of billing.

***Providers may not bill both Medicaid and the Refugee Health Program for the same services.***

The completed billing form (Attachment A and F) and health assessment screening form (Attachment D) are to be addressed to:

Nebraska Department of Health and Human Services
Division of Public Health
Refugee Services Program-Attn: Refugee Medical Coordinator
301 Centennial Mall South
P. O. Box 95026
Lincoln, NE 68509-5026
III. RESPONSIBILITIES FOR REFUGEE HEALTH SCREENING PROVIDERS

Refugee Health Screening Program providers must:

1. Demonstrate clinical and staffing capacity as well as experience in providing health screenings, in accordance with established protocols.

2. Be a licensed health care provider, such as a physician, hospital, community health center, county health department or clinic. A nurse practitioner, physician assistant, with maximal use of trained assistants. e.g., for blood pressure measurements, hearing or vision screening.

3. Coordinate health screening programs with reception and placement services provided by voluntary resettlement agencies (VOLAGs).

4. Comply with the Nebraska Refugee Health Assessment Guidelines.

5. Prescribe, refer, or supply appropriate medications for infectious diseases and other conditions identified during the health screening; provide immunizations indicated at the time of the health screening visit, per current recommendations of the Advisory Committee on Immunization Practices (ACIP) of the Centers for Disease Control and Prevention (CDC); and provide or refer for continuation of the required immunization series (series to include DPT/Td, IPV, HBV, MMR, Varicella, Influenza, Meningococcal, and Pneumococcal immunizations). HPV is not covered for adult males and females.

6. To the fullest extent possible, reasonable efforts should be made to see all refugees at least once within 30 days after arrival.

7. If the clinic is facing undue hardship and unable to see refugee patients within 30 days of arrival, it is expected that a referral will be made in a timely matter based upon the patient medical situation.

8. Arrange or establish referrals for services that are needed but are not covered in the initial health exam. The health screening focuses on screening for communicable disease and conditions that may prevent the refugee from an effective resettlement (gaining employment, language training, and going to school). Treatment and follow-up are not included, however, if a refugee does test positive for Chlamydia or Gonorrhea, treatment may be offered at the discretion of the Nebraska Infertility Prevention Project (IPP) which offers treatment (Ceftriaxone and Azithromycin). Treatment is available to providers for Isoniazid and Vitamin B6 at no cost to patients through the State TB Program.

9. Have the lab personnel (NPHL) or person drawing blood for interferon gamma release assay receive education approved by the refugee health coordinator by the lab or by the state TB Program. Specific education topics will need to include drawing the blood and troubleshooting problems for the interferon gamma release assay.
Infectious Diseases

Tuberculosis

- The Nebraska Refugee Program encourages clinics to utilize the Nebraska TB Program's Medication for Latent Tuberculosis Infection (LTBI). Isoniazid (INH) is available at no charge to patients.
- The provider must complete two forms, “LTBI Case Management Form” and the “LTBI Checklist.”
- See http://www.dhhs.ne.gov/puh/cod/Tuberculosis/forms.htm for the forms that need to be sent in.
- The medication is sent to providers to distribute. Any clinic in Nebraska that has a physician or physician assistant may utilize the program. INH is sent to the provider to distribute to patients.
- Please see specific details at http://www.dhhs.ne.gov/puh/cod/Tuberculosis/Medication-Policy.doc.
- Please contact the Nebraska TB Program Manager, for questions. The phone is (402) 471-6441.
- If the provider would like to do the 12 week regiment of INH and Rifapentine, it is recommended to be done by directly observed therapy with frequent monitoring of patients. This medication regimen is not available by DHHS TB Program.

Sexually Transmitted Diseases

- Sexually transmitted disease (STD) testing will be provided by the Nebraska Infertility Prevention Project (IPP).
- Contact the coordinator of the IPP Program with questions.
- Urine STD testing is available through the IPP/Semi-STD project.
- Treatment (Azithromycin for Chlamydia and Ceftriaxone for Gonorrhea) is available at no charge.
- For clinics that are not enrolled, please contact the coordinator to set up an appointment. Lab specimens will be picked up by Nebraska Public Health Lab and there is an electronic form to complete for lab management.

10. Use qualified medical interpreters to assist with client interviews, health education and orientation to the U.S. health care system, and to facilitate the referral process. Please note Nebraska does not license medical interpreters, it will be up to the clinic to decide if an interpreter is qualified.

11. Maintain linkages to appropriate primary care providers or specialists for necessary follow-up services not available on site, including public health and inpatient facilities, psychological counselors, drug and alcohol treatment services and other community providers. Please see Attachment C for the release of information that must be completed for each refugee who needs referrals.

12. Assure continuity of care, and referrals (referral means setting up a specified appointment with a designated provider) are timely, and when possible, in proximity to the refugee’s residence.

- Refugees should be referred to participating Medicaid specialty and primary health care services for treatment and follow-up of acute and chronic conditions identified during the overseas and domestic health screening.
When refugees are referred for specialty or primary care, the referring health care providers must be informed of the results of the initial health screening (See Attachment D). It will be up to the provider to utilize their own release of information form to transfer health records between other health care providers.

Follow-up care may be provided by the provider performing the initial health screening but must be billed to Medicaid.

13. Refugees will be required to complete their vaccinations at the site where the initial health exam occurred.

14. The clinic will have a civil surgeon on staff to sign USCIS Form I-693 for verification of vaccinations (for adjustment of status at 1 year). This is included in the package rate of arrivals within 90 days of arrival. Health departments may utilize a blanket waiver as long as the physician on staff meets the civil surgeon requirements. For refugees who arrived in the U.S. without a Class A condition, only immunizations* need to be reviewed and updated. This service is included as part of the refugee health assessment screening.

- The USCIS Form I-693 is used to record immunizations and must be signed by the civil surgeon or by a physician affiliated with the local public health agency (blanket waiver) completing the review. The following sections of USCIS Form I-693 need to be completed:
  a. Part 1: Information about you
  b. Part 2: Section 5. Vaccinations
  c. Part 5: Civil surgeon's certification

  OR
  d. Part 6: Health department's identifying information

- For refugees who arrived in the U.S. with a Class A condition, the entire medical exam is required, including any necessary vaccinations. This is not covered within the refugee health assessment screening.

- Refugees must meet vaccination requirements according to age-appropriate recommendations by the Advisory Committee for Immunization Practices (ACIP). Because completion of a vaccine series often requires several months, applicants are required to complete at least one dose of each vaccine by the time of assessment for the I-693, and are encouraged to follow up with a primary health care provider to complete the series.

- Asylees and Parolees are not included in this service due to the requirement a full exam must be completed in addition to vaccinations, which is outside the scope of this program.

- The clinic can provide civil surgeon signatures on vaccines up to 13 months after their original arrival date. After that time frame, the refugee is responsible for payment of a civil surgeon signature.

- Vaccines for adults that are covered under the program include Hepatitis A (two doses), Hepatitis B (three doses), Tetanus (2 doses), and Tdap (1dose) Zoster (one dose), MMR (one dose), Flu (one dose) Varicella (two doses, Pneumococcal, Meningococcal. HPV is not covered for males or females. The vaccine coverage is the same for the 90 day-8 month arrivals as well.

Question and Answers about Civil Surgeons
15. Maintain patient records in accordance with 45 CFR 400.28.

16. Participate in refugee health meetings and site visits conducted by Nebraska DHHS Refugee Services Program staff.

- During the site visits providers must assure prompt access to all program sites and all records and reports relating to the program. To do so, the health care provider must provide a disclosure form to its patients to have Nebraska DHHS staff access their records for its monitoring purpose.
- Records are the property of the provider agency. However, information pertaining to Refugee Health Screening Program surveillance requirements must be accessible to Nebraska DHHS.
- Please submit the quarterly Quality Assurance form (Attachment B) once a quarter (due January 15th, April 16th, July 16th, and October 16th). Please send via mail, fax, or secure email.

17. Maintain adequate staffing and systems for fiscal accounting and program billing.

IV. RESPONSIBILITY OF THE STATE -- Nebraska DHHS Refugee Health Program

The Nebraska DHHS Refugee Health Program will support the efforts of the designated health screening providers by furnishing technical assistance to enhance the effectiveness of the Program including, but not be limited to, the following:

1. Provide direction, training, health screening forms and other materials as needed to health screening providers regarding the Refugee Health Screening Program.

2. Oversee the health screening provider’s performance and conduct on-site visits to the contracted sites to ensure compliance with the terms of the agreement. The Program will also provide telephone and/or on-site technical assistance to providers as required.

3. Provide pertinent information, such as trends in morbidity that may be specific to ethnicity or country of origin, to be shared with health screening providers and, as applicable, VOLAGs and other governmental and non-governmental groups.

4. Use surveillance findings as the basis for recommendations for revisions to the health screening, payments and instructions (Attachment A and B).

5. Assist in the establishment of linkages between VOLAGs and refugee health screening providers to ensure new arrivals’ access to medical care.

6. Reimburse contractors for services provided.

7. Notify the health screening providers immediately when a problem arises regarding the performance of duties as specified in the agreement.
V. NEBRASKA REFUGEE HEALTH ASSESSMENT GUIDELINES AND INSTRUCTIONS

The patient must be a valid class of refugee (holding I-94, letter of asylum, certification as trafficking victim, etc.). Complete payment for health screens will be paid only if the screen is initiated within ninety (90) days of the refugee’s arrival into the United States (45 CFR 400.107).

Overseas Medical Document Review

The purpose of this section is to review the findings from:
- The overseas visa medical examination form as reported on the DS-2053 (OF-157)
- The overseas Medical Examination of Applicants for U.S. Visas
- Other related documents and follow up on identified conditions.

If available, review:
- The overseas medical exam DS – 2053 (OF-157), IOM bag. (The International Organization for Migration [IOM] manages health issues associated with processing of migrants in sending, transit, and receiving countries. IOM’s health services work include medical screening for travel and resettlement.)
- Documentation of Class A or B conditions
- Any other overseas medical documents

Confirm or reject overseas diagnoses. If further evaluation is needed to confirm any diagnosis, refer the refugee for evaluation as appropriate.

What if overseas records are not available?

Missing overseas records may be due to one of the following situations:
- Records are available but the refugee forgot to bring them. In this situation, ask the refugee if he/she can bring the records to the next visit. Make it very clear to the refugee that it is very important for the purpose of the health assessment to review these records. In this case, proceed with the health screening assessment. Providers may want to defer immunizations to the next visit.
- Only some records are available. Proceed with the health screening assessment.
- No records are available. On occasion, the refugee misplaces their medical. Call the Nebraska Refugee Health Program at 402-471-1372 with the A# and request to have the record looked up electronically.
Instructions For the Refugee Health Assessment Screening Form
Print/Type all information clearly.

SECTION I: Refugee Personal and Demographic Information (Nebraska Refugee Health Assessment Screening Form, Attachment D, page 1-2)

The purpose of this section is to ensure that demographic data and health assessment data is collected, recorded and tracked for further evaluation and for program monitoring purposes.

Name: Family name first, followed by given name and middle name. (REQUIRED)

Date of Birth: Include month, day, and year. (REQUIRED)

Arrival Status: Mark if patient is refugee, asylee, victim or trafficking. (REQUIRED)

Note: Asylees’ status is not always indicated on their I-94 form; instead their I-94 status is noted on a letter from USCIS indicating their asylum granted status and the date the asylum granted. A copy of any verification documents must be retained in the refugee’s file.

Alien number: The “A” number is usually located at the back of the USCIS form I-94 departure. (REQUIRED)

Arrival in U.S. OR Status Granted Date: Month/Day/Year. The date of arrival is located on the front page of the I-94 under the refugee status stamp. The date may be stamped, typed written or hand-written. (REQUIRED)

Secondary Migrant: Please mark if refugee initially was resettled outside of Nebraska and has since relocated to Nebraska. (REQUIRED)

Sex: Mark Male or Female (REQUIRED)

TB Class A or B: Please note if a refugee is Class A or has a Class TB status. (REQUIRED if Class A or Class B)

Site: Please mark which site the initial refugee health screening took place. (REQUIRED)

Oversees Medical Document Review: Please note if the overseas medical document was available for review. (REQUIRED)

Allergies: Please note any allergies the patient has. If none, please mark no known medical allergies. (REQUIRED)

Interpreter Used: Please mark if an interpreter was used for any part of the refugee initial health screening.

Language Spoken: Record the language that the refugee identifies as their native language(s).

Blood Pressure: Perform blood pressure on all refugees. (REQUIRED)

Height: Record height or length in inches for all refugees. (REQUIRED)

Weight: Record in pounds. (REQUIRED)
Nutritional evaluation of all refugee children 18 and under upon arrival with Body Mass Index. (REQUIRED IF UNDER AGE 18)

Temperature: Record in Celsius.

Head Circumference: For all children 2 years of age and under (REQUIRED IF UNDER 2 YEARS OF AGE)

Visual Acuity: Mark referral if patient wears glasses or has poor vision. May use Snellen Eye Chart at provider's discretion, but is not required. May use alternative vision charts to assist with LEP populations. Hearing-Whisper Test: Whisper in the patient's ear. If there is no difficulty, mark Within Normal Limits. If patient has difficulty with hearing or wears hearing aids please mark referral.

Screening Tests

TB Skin Test: Tuberculosis (TB)
- Perform an interferon gamma release assay for refugees age five and older. Perform a tuberculin skin test (TST) for individuals younger than age five regardless of BCG history, unless documented previous test. Pregnancy is not a medical contraindication for TB testing or follow up. TST administered prior to 6 months of age may yield false negative results.
- A chest x-ray should be performed for all individuals with a positive interferon gamma release assay or TST result
- A chest x-ray should also be performed regardless of interferon gamma release assay results or TST results for:
  1. Those with a TB Class A or B designation from overseas exam, and/or
  2. Those who have symptoms compatible with TB disease.
- If an indeterminate result is found on the interferon gamma release assay or the TST is just below the cutoff for a positive result, please refer the refugee to be rescreened in 8 weeks. The rescreening process is outside the scope of payment for the refugee health program. Complete the Treatment start date if Isoniazid is stated. (Required)

The “TB Follow-Up Worksheet” will be entered into EDN when the initial health assessment is completed for all Class B TB arrivals. This worksheet data is submitted to CDC electronically. It is both important and required to complete the form.

STDs: Sexually Transmitted Diseases:
- Screen for syphilis for age 15 and above using RPR. (REQUIRED)
- If you suspect syphilis in a patient younger than age 15, providers may run a RPR based upon their health history, risk factors or abnormal exam.
- If the RPR is positive, draw a FTA as a confirmatory test.
- If syphilis is suspected after the RPR or FTA is run, please refer to the county STD clinic or treat appropriately at your clinic. Bicillin LA is available at the state for no charge.
- Please use Nebraska Infertility Prevention Project Semi-STD testing account for Chlamydia and Gonorrhea urine testing. Please contact the Nebraska Infertility Prevention Project Coordinator, (402-471-3724) for questions on IPP on how to set up an account.
- HIV/AIDS: Human Immunodeficiency Virus/Acquired Immunodeficiency Syndrome
  - For children age 18 months and younger, perform a HIV 1 RNA quantitative RT-PCR and HIV 2 RNA quantitative RT PCR
For children over 18 months through 18 years of age, perform a HIV 1 EIA and HIV 2 EIA.

EIA HIV 1 and HIV 2 EIA for adults 19 years of age and over, HIV rapid testing is encouraged. It is expected that HIV testing supplies will be purchased using RMA funds, instead of Nebraska DHHS Counseling and Testing HIV tests.

**Pregnancy:**
- Complete a urine pregnancy test for all females of childbearing age using an opt-out approach. **(REQUIRED)**

**Hepatitis Screening:** B, **(REQUIRED)**
- Determine Hepatitis, B and infection status for all refugees – adults and children – with the following serologic tests:
  1. HBsAg (hepatitis B surface antigen)
  2. HBsHBcAb-IgM (Hepatitis B IgM core antibody)
  3. HBsAb (Hepatitis, B surface antibody)

**Hepatitis C Testing (OPTIONAL)**
- Perform Hepatitis C testing on patients with risk factors (tattoo history, blood transfusions, IV Drug User, mother has Hepatitis C or based upon provider's discretion) (HC Ab) Hepatitis C Antibodies.

**Intestinal Parasite Screening:**
- Instruct all refugees to submit two stool specimens obtained more than 24 hours apart.
- Provide detailed instruction about specimen collection and give kits to patients.
- Draw a CBC with differential to evaluate for eosinophilia. The existence of a tissue invasive parasite must be considered in patients with eosinophilia. **(REQUIRED)**

The most commonly found pathogenic parasites are *Trichuris* (whipworm), *Giardia*, *Entamoeba histolytica*, *Schistosoma*, hookworm, and *Ascaris*. Parasites may obstruct the intestine, bile ducts, lymph channels, and capillaries of the brain and other organs, with serious medical consequences.

Lice and scabies mites are two common arthropod parasites often found in refugee populations. If positive, please refer or offer treatment (Medicaid).

**Strongyloidiasis Testing**
- Perform blood testing if refugee did not receive predeparture therapy. Predeparture therapy is Ivermectin. The Burmese from Thailand should all be receiving Ivermectin overseas. If someone did not receive Ivermectin overseas, the patient should be screened via blood. This includes testing all refugees if no Ivermectin was given overseas **(REQUIRED)**.

**Schistosomiasis**
- Individuals from Sub-Saharan who had contraindications to presumptive treatment at pre-departure that are not resolvable should be tested **(REQUIRED)**

**Varicella Titre**
- Draw Varicella Titre on refugee adults age 19 years and over.
- If non-immune or equivocal, vaccinate adults with two doses of Varicella Vaccine.
**CBC with Differential: Complete Blood Count**
- Evaluate for eosinophilia by obtaining a CBC with differential.
- Please note hemoglobin and hematocrit.
- Screen all refugees. **(REQUIRED)**

**Chem 8**
- Screen everyone with a Chem 8 (may utilize Chem 14 but added costs would be deducted from administrative costs)

**Malaria:**
African refugees should be treated with artemisinin-based combination therapy before departure. If no predeparture therapy was given, testing is encouraged for refugees coming from Africa.
- Clinicians should have a high index of suspicion for malaria, particularly for refugees from tropical and subtropical areas who have fever of unknown origin or other characteristic symptoms.
- Sub-Saharan Africans frequently originate in highly endemic areas where asymptomatic infection is common and should undergo either presumptive treatment on arrival (preferred) if there is no documentation of pre-departure therapy, or have laboratory screening.
- For all other refugees, asymptomatic infection is rare and testing should be performed only in individuals with signs or symptoms suggestive of disease.
- If malaria is suspected, a smear of peripheral blood should be examined for parasites. Accurate diagnosis depends on the quality of the blood film and the technique of laboratory personnel. When PCR is available it is the preferred method of diagnosis in asymptomatic refugees.
- Because treatment varies by species of *Plasmodium*, diagnosis should be confirmed by experienced personnel.
- A single blood film examination may be falsely negative for malaria parasites. Repeated blood films over 48 hours (e.g., every 12 hours x 3) may be required to exclude the possibility of malaria.
- To confirm diagnosis of questionable cases or to obtain appropriate treatment recommendations, contact the Nebraska Department of Health and Human Services.

**Lead Screening:**
- Refugee children age 6 months-16 years should have a venous blood lead screening level. **(REQUIRED)**
- No repeat levels will be covered under Refugee Medical Assistance Program.
- Please note specific level.

**Urinalysis:** Dipstick
- Ages 4 and up.
- Perform if patient is old enough to void a urine specimen.
- Do not perform if patient is unable to provide a clean catch sample (infants and toddlers).
- Please mark if the sample is within normal limits, has blood, protein, glucose, ketones or leukocytes. **(REQUIRED FOR PATIENTS WHO CAN VOID A CLEAN CATCH URINE SPECIMEN)**
Referrals:

- Please note any referrals made.
- Children should be given a vitamin referral for age 6-59 months or children age 5 and older with evidence of poor nutrition. Adults should be referred for a vitamin supplement if they present with clinical evidence of poor nutrition.
- Children under one year of age should be referred for newborn screening tests within their first year of life.

SECTION II: Core Health Screening (Nebraska Refugee Health Assessment Screening Form page 3-4)

NOTE: Be sure to fill out the last, first, middle name and alien number at the top of the page. This is especially useful when/if forms need to be faxed.

The purpose of this required section is to perform a complete, detailed history and physical examination for all refugees to ensure diagnosis and treatment of conditions not previously detected as well as to identify conditions with a potential to adversely impact effective resettlement of a refugee. While the Refugee Health Program is a screening program, clinicians should be cognizant that their assessment may be the first full medical evaluation the refugee patient has had. Therefore, providers are asked to perform a general history and physical exam. This may include migration history and history of trauma.

Providers should also recognize that the refugee health screening encounter may be a new cultural experience for many refugees and will provide a profound first impression about health care in U.S. Therefore, sensitivity toward the refugee’s gender, culture, and other issues is very important.

MEDICAL HISTORY (Attachment D-page 3) (REQUIRED)

Mark “0” if within normal limits. Mark with a check “✓” mark if abnormal or if problems are present. Comments may be noted at the bottom of page 3 and top of page 4).

PHYSICAL EXAM (Attachment D – page 3) (REQUIRED)

Summarize and record data on significant past or current medical conditions or disabilities as well as preventive care such as immunizations and dental work. Document any relevant family history as completely as possible. A copy of the refugee health assessment must remain in the refugee’s medical record at the clinical site.

Mark “0” if within normal limits, Mark with a check “✓” mark if abnormal or if problems are present.

Female and male reproductive health exams will not be covered under RMA. Please contact Every Woman Matters Program at (402) 471-0929 for more information on well woman exams or refer to a Medicaid provider.

Other

Dental Exam:
• Please look inside patient’s mouth and note any dental complaints. Please mark appropriate box. (REQUIRED)

IMMUNIZATION STATUS  (REQUIRED)

NESIIS: Nebraska State Information Immunization Information System

The purpose of this required section is to ensure that every child and adult refugee is appropriately immunized against vaccine-preventable diseases. It is preferred that refugees start immunizations within 90 days of their arrival to U.S. At a minimum, providers are required to initiate appropriate vaccination, refer refugees to primary care, and educate refugee about USCIS and school requirements, and follow-up timing.

Required Steps for Immunizations
Providers must do the following:

• Evaluate immunization history, titre lab review and review all available related overseas documentations
• Document immunity based on exam, history or serologic testing (Per Nebraska Refugee Health Assessment Guidelines)
• Use the Nebraska State Information Immunization Information System (NESIIS) to document immunizations for all refugees.
• Initiate all necessary age-appropriate vaccines per the Advisory Committee on Immunization Practices (ACIP) adult and children vaccine schedules. Human Papilloma Quadrivalent vaccines will not be covered for refugee adults (males or females).
• Give all refugees a childhood and/or adult vaccination booklet, with completed documentation of past and the Refugee Health Screening vaccinations.
• Instruct refugees to bring the documentation to all medical visits including the Civil Surgeon evaluation required for change of status applications.
• Utilize the “Vaccines for Children” program for children 18 and under for all vaccinations.

The refugee is not expected to provide a donation or administrative fee that sometimes is suggested for the Vaccines for Children Program. Administrative fees have been accounted for.

REFERRALS

The purpose of this section is to facilitate linkages to appropriate specialty and primary care providers for necessary follow-up services not available on site, including public health and inpatient facilities, psychosocial counselors, drug and alcohol treatment services and other community providers. Please check all referrals made.

Required Referrals to Primary Care

To ensure continuity of health care, all refugees must be referred to a primary care provider. Providers must refer refugees to a primary care provider either at the provider’s site or elsewhere.

Most refugees lack transportation, therefore, it is advisable that appointments be made in proximity to the refugee’s residence.
The name of the primary care provider (and/or clinic site), address, phone number and fax number of the provider; and appointment date, and the time must be noted on the health screening form.

Newborn screening should be a referral for all infants under one year of age.

**Other Referrals**

Providers should also make referrals as appropriate, for other medical, dental and support services.

**Authorization For The Release And Use Of Information**

The purpose of this section is to facilitate HIPAA compliance. This enables providers to allow Nebraska DHHS staff access to all refugee records, assuring prompt access to all program sites and reports relating to the Refugee Health Screening program.

Providers must provide an authorization for the release and use of protected health information form (PHI) to refugees for their signature and dating, which authorizes Nebraska DHHS staff access to their records for invoicing and monitoring purposes. Records are the property of the provider agency. However, information pertaining to Refugee Medical Screening Program invoices, reports and surveillance requirements must be accessible to Nebraska DHHS.

**NOTE:** Health providers or their affiliates may not sign the witness section. This section must be signed by a third party (non-affiliate of the health provider), e.g., resettlement agency representative, another patient or refugee, or a relative of a refugee.
