

NCIS Web-Nebraska Casemix Internet System Web is about to become a reality!

NCIS Web is a web-based casemix system that providers will be able to access online via a web link. Providers will be able to:

Request care level reports as well as view and print them. There will also be the capability to record messages to Medicaid concerning residents on the reports as well as receive an answer to their message. Along with these capabilities, it is also going to be the tool used for providers to enter bed hold days. No more mailing back and forth!

An error listing will be available for MDS coordinators in order to see some of the basic errors that may be preventing their assessments from being processed by Nebraska Medicaid.

The weighted days report will also be obtained using this system. The capability to enter messages, questions, and bed hold days will also exist on NCIS Web. It will be possible for these reports to be run more than once a year in order to ensure accuracy and avoid the once a year rush to get these reports in sync with the cost report data, or vice versa.

Pilot testing for this system is anticipated to begin within the next month.

The process for gaining access to this system will entail completion of forms to ensure HIPAA and PHI privacy as well as obtaining a user id and password.

Please stay tuned for more information coming your way!
