

Nebraska Cancer and Smoking Disease Research Program

Fiscal Year 2015-16 Competitively Awarded Grants to the University of Nebraska

- Nicotine Enhancement of Alcohol Seeking
- Altered N-glycans in Golgi Enzymes of Aggressive Cancer
- Transcription Factors Alterations in Aggressive Lymphoma
- The Role of Histone Deacetylases in Inv(16) Associated Acute Myeloid Leukemia
- Regulation of Colon Tumor Survival by Wdr5
- How Nicotine Sensitivity in Adulthood is Altered by Adolescent Antipsychotic Treatment: A Preclinical Investigation
- Cholangiocarcinoma Cell Proliferation Driven by FGFR4
- A Novel Immune Complement Inhibitor for Prostate Cancer
- Development of Antimetastatic Treatments for Lung Cancer
- Pancreatic Tumor Cells: SOX2 and MEK Inhibitors
- Mechanisms of Genome Instability in Pole Mutant Tumors
- Estrogen Regulation of Glutaminase in Pulmonary LAM
- Role of JAK1 in Inflammatory Cytokine Signaling in PDAC
- Regulation of the Fanconi Anemia Pathway by CTRP1
