FY 2022 Behavioral Health Consumer Survey

Overview

Based on the first, second, and third quarters of 2022, the Department of Health and Human Services' Division of Behavioral Health (DBH) conducted the annual Behavioral Health Consumer Survey. This survey solicited input from adult consumers and youth consumers (via caregivers) receiving DBH-funded behavioral health services in the community-based behavioral health system across Nebraska. The Consumer Survey collects data pertinent to the quality and impact of the services provided. Items are aligned with seven domains: access, quality and appropriateness, outcomes, participation in treatment planning, general satisfaction, functioning, and social connectedness.

DBH contracted with the Bureau of Sociological Research (BOSR) at the University of Nebraska-Lincoln. The survey was conducted through mail, web, text, and telephone modes. BOSR fielded the web survey and telephone interviews and entered returned mail responses into the survey database. All data analysis was performed by the DBH data team.

Results were analyzed across the seven domains from a statewide perspective and compared outcomes to previous iterations of the Consumer Survey dating back to 2017. A comprehensive analysis of results was conducted which examined the domains in relation to a variety of factors including Behavioral Health Region, demographic factors, service type, and alternative service delivery. Additional analyses considered factors such as physical health, awareness of peer support services, and crisis response.

Highlights from the 2022 Consumer Survey

Response Rates

For 2022 there were decreases in response rates for both the adult and youth samples relative to 2021. The response rate for the adult survey was 15.3% as compared to 29.5% in 2021. Similarly, the response rate for the youth survey was 24.4% compared to the 2021 response rate of 32.6%. Decreased response rates is an issue that has plagued survey collection efforts. There were 871 responses from adult consumers and 315 responses from youth caregivers.

Previous Consumer Survey collection methods were supplemented with an expansion in the use of non-traditional survey collection methods to enhance response rates. Specifically, further efforts were made to provide web links for respondents to complete the survey via the internet, QR codes, and the ability to access the survey by sending a text message from their phone were added. In total, 19.6% of adult survey responses and 21.3% of youth survey responses occurred via a method other than phone-based interviews or mailed-in completed surveys.

Adult Survey Findings

Key Measures

Four of the five key measures that are tracked exceeded the 2017 baseline. The percentage of respondents reporting that staff returned their calls within 24 hours represents the sole key measure that failed to exceed its baseline. For 2022, 80.9% of respondents reported that their calls were returned within 24 hours, which falls short of the 2017 baseline of 81.9%. This further represents a decrease from 83.5% in 2021.

Analysis of Domains

As compared to 2021, increases were observed among three domains (Access, Functioning, and Participation in Treatment Planning) while decreases were observed among the other four domains (General Satisfaction, Outcomes, Quality/Appropriateness, and Social Connectedness). However, no domains had statistically significant differences between 2021 and 2022.

There were few statistically significant differences in domain scores between regions. Access was the only domain with significant differences. Specifically, Region 1 (92.0%) had higher scores than Regions 3 (82.1%) and 6 (80.0%) while Region 4 (89.2%) had higher scores than Regions 5 (81.4%) and 6 (80.0%).

Alternative Service Delivery

There were statistically significant differences observed for several measures among respondents who had accessed a portion of their services through alternative delivery methods (i.e. phone or telehealth) as compared to those respondents who had only accessed services through traditional delivery methods.

There were three domains for which those who accessed a portion of their services through alternatively delivered methods scored more positively than those accessing only traditionally delivered services: Outcomes (t=65.4%, a=73.0%), Functioning (t=68.7%, a=76.5%), and Social Connectedness (t=61.0%, a=71.5%). Additionally, there were three single measures that exhibited similar patterns: improved housing (t= 55.2%, a=69.2%) and/or financial (t=48.0%, a=60.7%) situations and community belongingness (t= 48.9%, a=61.1%).

Peer Support/Crisis Response

Among adult respondents, 47.6% reported being aware of peer-provided services. Respondents placed a great deal of importance on mobile crisis as 79.2% reported that it was important to have crisis response in their home or community as opposed to a Behavioral Health Crisis or Urgent Care setting. Just over 23% of adult respondents were aware of the 988 behavioral health emergency line. Among those who were aware of the 988 line, respondents mostly reported hearing about the line by either word of mouth (39.0%) or social media (22.6%). Overall, 73.1% of adult respondents reported that they were likely or very likely to call a three-digit number if they or a loved one were experiencing a behavioral health emergency.

Youth Survey Findings

Key Measures

Three of the five key measures that were tracked exceeded the 2017 baseline while two fell short. The percentage of youth caregivers reporting that staff talked to them in a way that they understood (93.8%) was below the baseline of 94.3%. Likewise, 67.9% of youth caregivers reported that the services their child received have improved his/her quality of life, which compares to the baseline value of 68.7%.

Analysis of Domains

As compared to 2021, increases were observed among three domains (Functioning, General Satisfaction, and Outcomes) while decreases were observed among the other four domains (Access, Cultural Sensitivity, Family Involvement, and Social Connectedness). However, no domains had statistically significant differences between 2021 and 2022.

Statistically significant differences between regions were observed among the three domains. For the General Satisfaction domain, Region 1 had a higher score (90.3%) than Regions 3 (69.0%) and 6 (81.6%). Region 1 scored higher on the Access domain (96.7%) than Regions 3 (70.9%) and 4 (75.6%). For the Family Involvement domain, Region 3 had lower scores (69.3%) than Regions 1 (90.3%), 4 (87.0%), 5 (90.4%), and 6 (86.5%). The relatively small youth survey sample size does suggest caution should be exercised when considering these results.

Peer Support/Crisis Response

Among responding youth caregivers, 53.3% reported being aware of peer-provided services. Respondents placed a great deal of importance on mobile crisis as 89.1% reported that it was important to have crisis response in their home or community as opposed to a Behavioral Health Crisis or Urgent Care setting. Overall, 28.7% of responding youth caregivers were aware of the 988 behavioral health emergency line. Among those who were aware of the 988 line, respondents mostly reported hearing about the line by either word of mouth (32.5%) or social media (20.5%). Overall, 77.0% of responding youth caregivers reported that they were likely or very likely to call a three-digit number if they or a loved one were experiencing a behavioral health emergency.

The results of the 2022 Adult and Youth Consumer Surveys suggest the following opportunities for continuing work and evaluation aimed at improving the provision of behavioral health services in Nebraska:

- ◆ There was a notable decrease in response rates between 2021 and 2022. This decrease is consistent with larger ongoing trends regarding survey research. Lower response rates, and the resultant smaller samples, decrease confidence in the ability to analyze and interpret collected survey data. Work needs to continue to identify ways to enhance survey responses for future Consumer Survey collection efforts.
- ◆ The results indicate that adult respondents are largely amenable to services that are partially delivered via methods that vary from services traditionally provided in person. Results also indicate that there are some measures for which consumers accessing a portion of their services through alternative delivery methods reported higher levels of positive responses than those accessing services only through traditional delivery methods. More sophisticated analysis of alternatively delivered services is needed in order to understand the effectiveness of alternatively delivered services. Continued consideration of alternative delivery methods is important given the potential of alternative delivery methods to help address disparities in access to care with respect to rurality.
- ◆ Youth caregivers reported a substantially smaller rate of being likely to recommend the use of telehealth services to others as compared to adult respondents. Efforts should be made to identify factors undergirding this disparity in order to work to improve the provision of youth behavioral services in Nebraska provided via telehealth.
- ◆ Awareness of peer-provided services remains low with around half of adult respondents and youth caregivers reporting being aware of such services. This indicates a clear opportunity to increase awareness of the benefits and availability of peer-provided services.
- ◆ There was a low level of awareness of the 988 behavioral health crisis line, with just 23% of adult respondents and 29% of youth caregivers reporting that they were aware of the 988 line. Given the timing of survey collection relative to the initiation of the 988 crisis line, low awareness is not entirely unexpected. It will be important, though, to monitor this metric going forward in order to inform future efforts aimed at increasing awareness of 988. This is particularly relevant given that a large portion of the samples reported that mobile crisis was important to them and that they were like to call a three-digit number during a crisis situation.
- ◆ For the youth survey, there has been a recent downward trend in agreement with the statement: *Overall I am satisfied with the services my child received*. The level of agreement with this statement peaked in 2020 and has declined since. Services provided to youths should be analyzed in order to identify factors contributing to the observed decreases.

WHO?

Behavioral Health Consumers - adults or (caregivers of) youth - who received community-based services (CBS) between July and December of 2021

WHAT?

The consumer survey is a consumer's opportunity to share perceptions about a service received. The survey is voluntary and consumer responses are anonymous.

WHY?

To assess the quality and impact of DBH-funded, community-based services
To identify areas where improvements may be needed in our behavioral health service system
To complete reporting for the Uniform Data on Public Mental Health System

WHEN?

Data is collected from April-September

WHERE?

Access = paper survey received in the mail, a web link, QR code, texting a phone number, or through a telephone call

Content

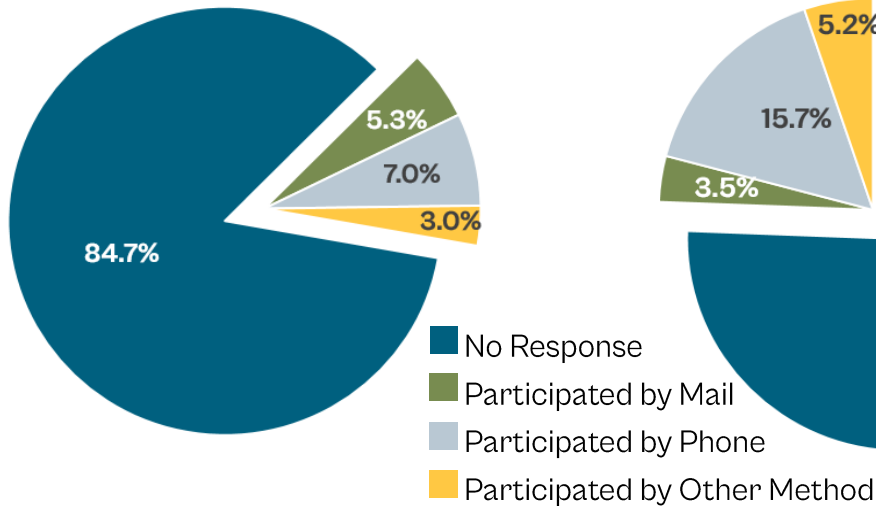

- Mental Health Statistics Improvement Program (**MHSIP**) Consumer Satisfaction Survey (Adult Survey)
- MHSIP Youth Services Survey (**YSS**) & MHSIP Youth Services Survey for Families (**YSS-F**)
- Behavioral Risk Factor Surveillance System (**BRFSS**)
- Questions pertaining to:
 - Improved functioning and social connectedness
 - Alternative service delivery
 - Peer service awareness
 - 988/crisis response

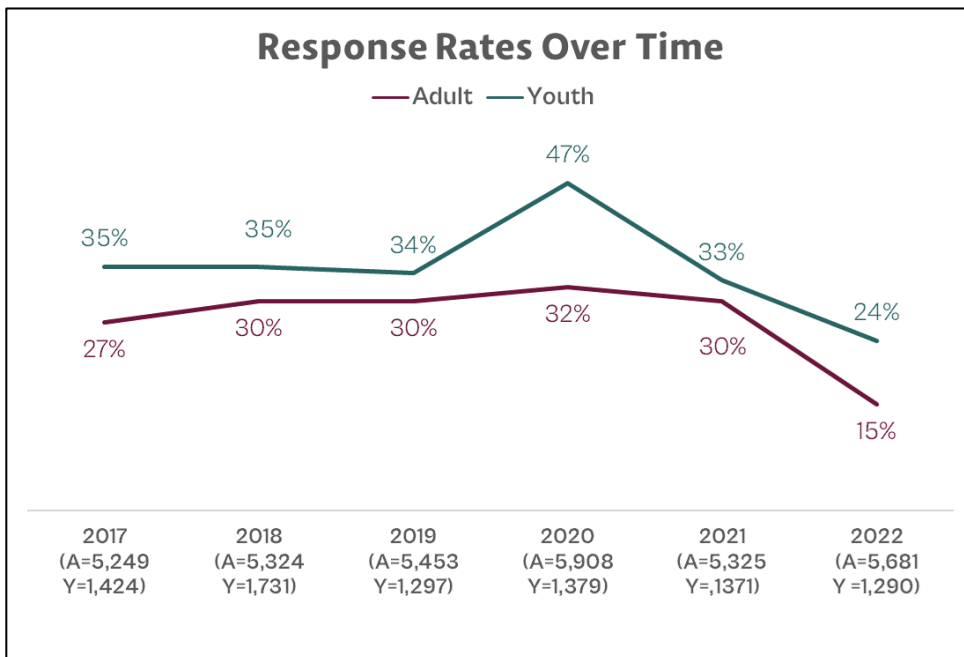

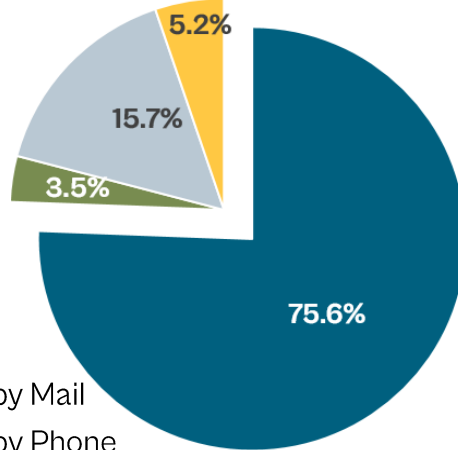

"Many times I did not feel that my testimony and concerns were taken seriously."
Consumer

Consumers were offered multiple ways to access the 2022 Consumer Survey. The first correspondence introducing the survey outlined traditional paper, email link, and phone as well as additional weblinks and options for text or scanning a QR code. As noted across the survey industry, response rates are showing a downward trend.

2022 Adult (N=5,681)

2022 Youth (N=1,290)

"Out of my time in the hospital I look back and am thankful for the entire staff. I got the help I needed and the honesty even when I didn't want to hear it."
Consumer

Demographic Overview

- ◀ 871 total respondents
- ◀ 54.8% female, 45.2% male
- ◀ Age range: 19 to 83 years, Average Age: 44.1 years
- ◀ 76.4% identified as non-Hispanic White
- ◀ 23.6% identified as non-White or Hispanic

Top Responses

92.2%

Staff respected my wishes about who is and who is not to be given information about my treatment.

92.0%

Staff treated me with respect and dignity.

91.0%

I was given information about my rights.

Service Quality

I like the services I received here.

88.8%

I would recommend this agency to a friend or family member.

87.3%

Most Improved from 2021

51.9% → 56.0%

As a result of the services I received, I have friends in my neighborhood.

78.9% → 81.6%

I, not the staff, decided my treatment goals.

“My provider is one of the best people I've met. He saved my marriage and did everything with empathy and no judgment.” Consumer

Some consumers indicated that in addition to the traditional face-to-face service delivery, they received a portion of their services through alternative delivery methods.

Traditional & Phone

60.8% of adult respondents reported receiving a portion of their services by phone. Of those who reported traditional and phone.

70.0%

Were likely or very likely to recommend receiving phone-based services.

Traditional & Telehealth

59.8% of adult respondents reported receiving a portion of their services via telehealth services. Of those who reported traditional and telehealth.

72.2%

Were likely or very likely to recommend receiving telehealth services.

Key Measures: Change Over Time

2017 Baseline

2022 Result

86.1%

Increase consumer satisfaction with the services they receive.

88.8%

of adult clients expressed satisfaction with the services they received.

79.4%

Increase consumer satisfaction with the quality of service they receive.

81.1%

of adult clients agreed that the services they received improved their quality of life.

81.9%

Increase the provider return rate for calls to consumers.

80.9%

of adult clients reported that staff returned their calls within 24 hours.

80.5%

Increase the access to services needed.

82.2%

of adult clients reported they were able to get all the services they needed.

70.5%

Improve family relationships.

73.4%

of adult clients reported they get along better with family as a result of services received.

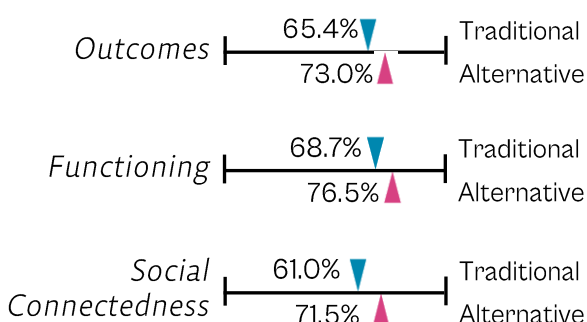

"I found it difficult to form relationships there. People were in a clique, turnover of staff was very high." Consumer

Domains Included

- Access
- Functioning
- General Satisfaction
- Outcomes
- Quality/Appropriateness
- Social Connectedness
- Participation in Treatment Planning

There are no domains with statistically significant differences between 2021 and 2022.

Domain	2017	2018	2019	2020	2021	2022
Access	82.3%	81.5%	83.3%	84.4%	83.7%	84.3%
Functioning	69.9%	69.6%	72.9%	73.9%	73.7%	74.7%
General Satisfaction	86.1%	85.9%	85.8%	88.4%	86.5%	85.4%
Outcomes	69.2%	69.4%	71.6%	73.3%	71.6%	71.2%
Participation in Treatment Planning	76.4%	76.7%	80.3%	80.7%	79.3%	82.4%
Quality/Appropriateness	85.9%	86.5%	87.2%	89.3%	88.9%	87.5%
Social Connectedness	67.1%	66.0%	67.4%	70.8%	69.3%	69.1%

Alternative Services

Adult respondents who accessed a portion of their services delivered via telehealth or phone reported significantly higher agreement than those accessing only traditionally delivered services for three domains: outcomes, functioning, and social connectedness.

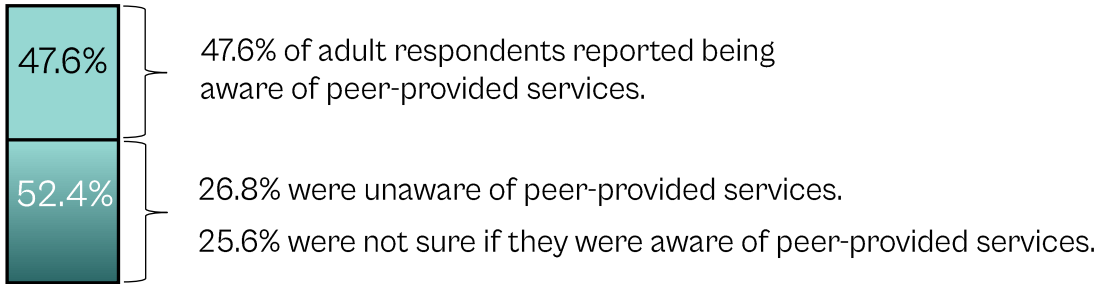

Domain	Region 1	Region 2	Region 3	Region 4	Region 5	Region 6
Access	92.0%	86.0%	82.1%	89.2%	81.4%	80.0%
Functioning	73.2%	70.5%	77.0%	79.9%	72.0%	72.7%
General Satisfaction	90.8%	87.0%	84.1%	86.2%	85.0%	82.9%
Outcomes	73.1%	74.2%	70.8%	75.3%	66.7%	69.2%
Participation in Treatment Planning	87.3%	82.5%	80.1%	83.2%	81.6%	82.1%
Quality/Appropriateness	90.3%	87.5%	85.6%	90.2%	89.1%	83.8%
Social Connectedness	71.0%	67.8%	67.1%	71.3%	68.2%	69.6%
Total Respondents	77	102	184	169	167	171

Regional Differences

- Few significant differences in ratings between regions
- Significant differences in the Access domain
 - Region 1 was higher than Regions 3 and 6
 - Region 4 was higher than Regions 5 and 6

“At first I hated that place, but after I was sober for a while, I realized that that place saved my life.” Consumer

Awareness of Peer Provided Services

"If I had not had the opportunity to receive help, I very likely would have died of suicide after the death of my son."
Consumer

79.2% of adult respondents reported that it was important to have a *Crisis Response Team* meet them in their home or community versus going to a type of Behavioral Health Crisis or Urgent Care setting.

Crisis Response

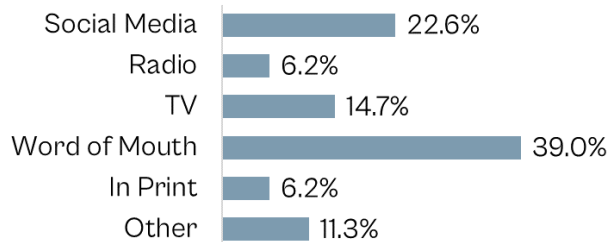

988 Awareness

23.1%

of adult respondents reported they were aware of the 988 behavioral health emergency line.

How They Heard About 988

"They showed me support and love. They helped me make it to my 1st year of sobriety and helped me rebuild so many relationships. Most importantly, with my kids." Consumer

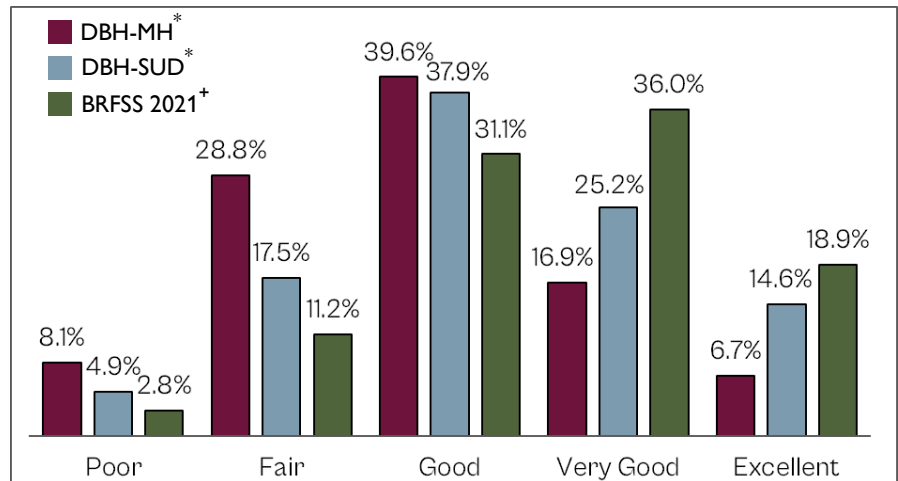

Likely to Call 988 Line

73.1% of adult respondents reported that they were likely or very likely to call a three-digit number if they or a loved one were experiencing a mental health or substance use emergency

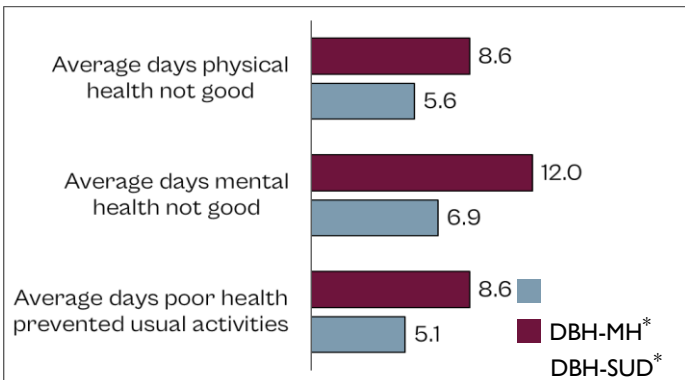

Self Rated Health

Respondents accessing mental health services report higher rates of poor or fair health than the general population and those respondents accessing substance use disorder services.

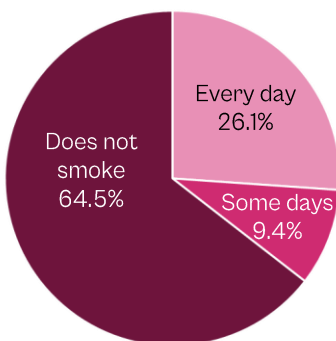

Unhealthy Days

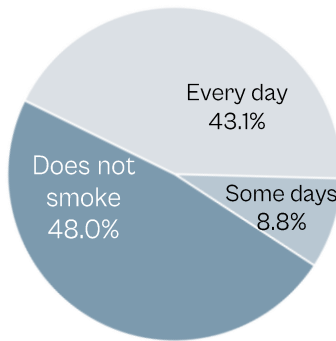

Respondents accessing mental health services report, on average, more days on which their physical and mental health is not good than those accessing substance use disorder services. They also report more days on which poor health prevented their usual activities.

Smoking

DBH-SUD*

BRFSS 2021+

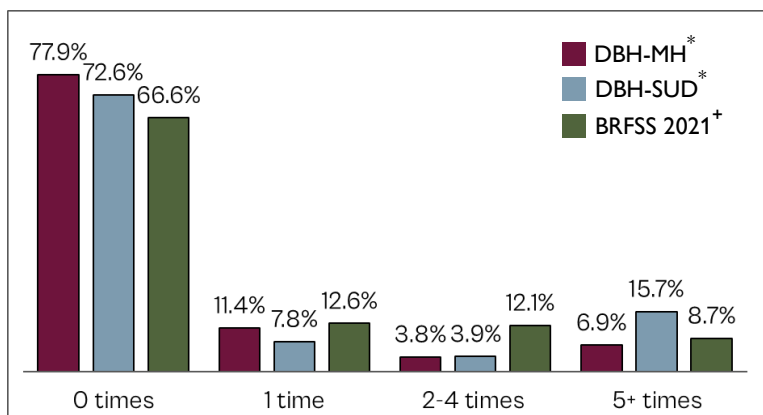

*Source for DBH-MH & DBH-SUD is FY22 DBH Consumer Survey

+BRFSS values are from the 2021 Behavioral Risk Factor Surveillance Survey

"I would like to have been exposed to more group activities and recreational therapy." Consumer

Binge Drinking

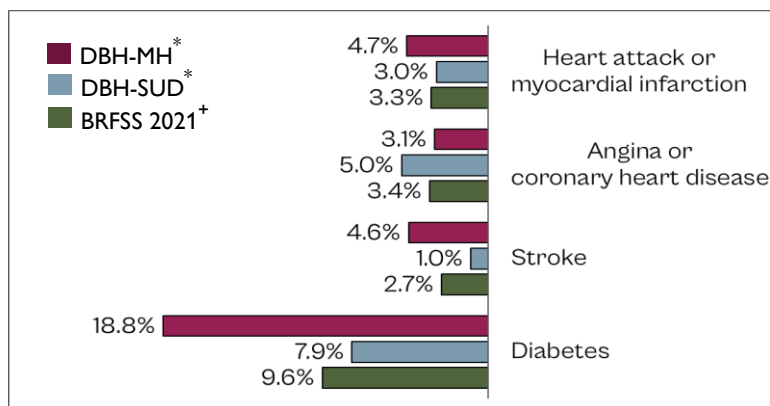

22.1% of respondents accessing mental health services and 27.4% of respondents accessing substance use disorder services reported binge drinking in the prior 30 days. This compares to 33.4% of the general population. Respondents reporting binge drinking reported binge drinking an average of 5.6 times in the past 30 days.

“Really blessed and grateful to have this at a time in my life where things haven't been quite the same as they had been.” Consumer

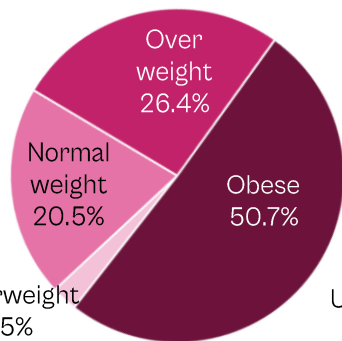

Chronic Conditions

Overall, 22.9% of adult respondents reported at least one chronic condition. A higher percentage of respondents accessing mental health services (24.6%) reported chronic conditions than did respondents accessing substance use disorder (11.9%) services. The most often reported condition was diabetes.

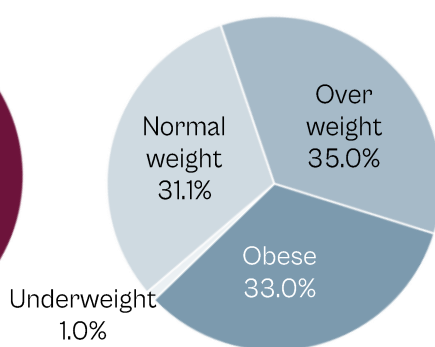

Obesity

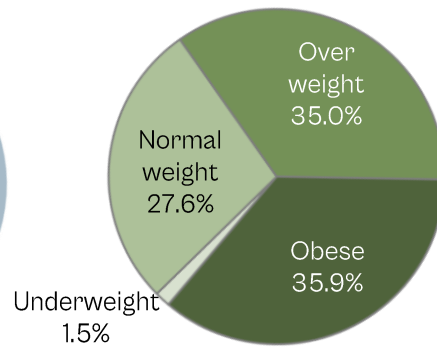

DBH-MH*

DBH-SUD*

BRFSS 2021⁺

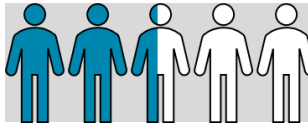

*Source for DBH-MH & DBH-SUD is FY22 DBH Consumer Survey

⁺BRFSS values are from the 2021 Behavioral Risk Factor Surveillance Survey

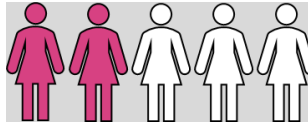

Gender

I am an active member of my community.

A statistically significant difference in being an active member of the community was observed between males and females.

49.1% of adult male respondents indicated agreement.

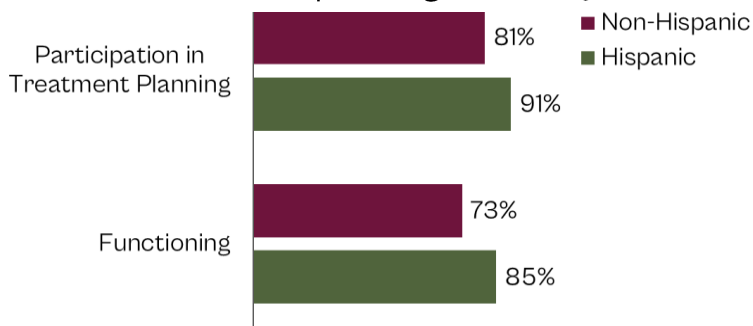

40.1% of adult female respondents indicated agreement.

"I'm grateful beyond measure for the quality of services provided to me here, they are consistently helpful, supportive, and encouraging." Consumer

Ethnicity

Percent Responding Positively

Significant differences in responding positively to two domains.

Participation in Treatment Planning and Functioning was observed on the basis of ethnicity.

Service Type

I like the services I received here.

Adult respondents accessing mental health (MH) services reported a statistically significantly higher level of overall satisfaction than those who accessed substance use disorder services.

MH

89.8% of respondents accessing MH services indicated agreement.

SUD

82.6% of respondents accessing SUD services indicated agreement.

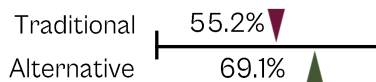

"I feel that I have a real and lasting chance to be part of this world and in a good way." Consumer

Services Partially Delivered Through Alternative Methods

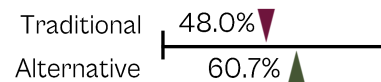

Significant differences were observed for several key indicators according to whether respondents accessed a portion of their services through alternative delivery methods or only through traditional delivery methods.

Outcomes/Functioning

Housing Situation Improved

Financial Situation Improved

A significantly higher percentage of adult respondents who had accessed a portion of their services through alternative delivery methods reported that their housing and/or financial situation had improved as a result of services received than respondents who had accessed only traditionally delivered services.

"When I first started therapy, I was beyond damaged, was ready to die, and trusted no one. Today, because of the help I've received, I'm not recognizable as that person - so Thank You!" Consumer

Community

A significantly higher percentage of adult respondents who accessed a portion of their services through alternative delivery methods reported feeling community belongingness than those who accessed only traditionally delivered services.

I feel I belong in my community.

Traditional Only
48.9%

indicated agreement

Some Alternative
61.1%

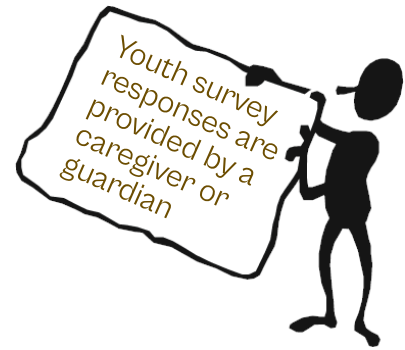

indicated agreement

"I wish I would have gotten more help from my case worker. I seen her for over a month and didn't fill out any housing papers or anything and was being evicted. I've lost my home and gone off my meds from it all." Consumer

Demographic Overview

- 315 total respondents ➤
- 52.5% boys, 47.5% girls ➤
- Youth age range: 4 to 18 years, Average Age: 13.5 years ➤
- 64.2% identified as non-Hispanic White ➤
- 35.8% identified as non-White or Hispanic ➤

Top Responses

The staff spoke with me in a way that I understood.

93.8%

The staff treated me with respect and dignity.

92.2%

The staff respected my family's religious/spiritual beliefs.

91.9%

Service Quality

81.5%

Overall, I am satisfied with the services my child received.

65.3%

My family got as much help as we needed for my child.

88.1%

I participated in my child's treatment.

Most Improved from 2021

As a direct result of the services, my child is doing better in school and/or work.

58.1% → 63.2%

As a direct result of the services, my child is better able to do the things he/she wants to do.

63.0% → 66.7%

"Our worker is a very amazing person. If I have a problem, I can call any time. If we need anything she's always there to help with additional services access." Caregiver

Some consumers indicated that in addition to the traditional face-to-face service delivery, they received a portion of their services through alternative delivery methods.

Traditional & Phone

66.7% of youth caregivers reported that their child received services by phone. Of those who reported traditional and phone.

68.6%

Were likely or very likely to recommend receiving phone-based services.

Traditional & Telehealth

54.3% of youth caregivers reported that their child received telehealth services. Of those who reported traditional and telehealth.

53.2%

Were likely or very likely to recommend receiving telehealth services.

Key Measures: Change Over Time

2017 Baseline

2022 Result

94.3%

Increase consumer satisfaction with the way staff speaks to them.

93.8%

of youth caregivers agreed that staff spoke with them in a way that they understood.

63.8%

Increase consumer satisfaction with the amount of help their family received.

65.3%

of youth caregivers agreed that their family got as much help as they needed for their child.

58.1%

Increase youth's ability to cope when things go wrong.

59.7%

of youth caregivers agreed their child was better able to cope when things go wrong.

68.7%

Increase youth's quality of life.

67.9%

of youth caregivers reported that the services their child received have improved his/her quality of life.

65.1%

Improve the ability of youth to do things he/she wants to do.

66.7%

of youth caregivers reported that their child is better able to do the things he/she wants to do.

"My child says she felt heard and that she likes the program. Grateful with the program because they help her through the process." Caregiver

Note: There are no domains with statistically significant differences between 2021 and 2022.

Functioning	66.7%	84.6%	59.3%	75.6%	64.0%	58.8%
General Satisfaction	90.3%	92.3%	69.0%	82.6%	78.4%	69.8%
Outcomes	66.7%	76.9%	58.1%	71.7%	62.0%	60.8%
Social Connectedness	83.3%	92.3%	71.4%	77.8%	78.4%	75.0%
Total Respondents	31	13	89	46	53	53

“They came in with good ideas, they never implemented any of them. Our worker quit and kept rescheduling. They really didn’t do anything, we didn’t have a team. No support. I discontinued services.” Caregiver

Regional Differences

- General Satisfaction: Region 1 was higher than Regions 3 and 6.
- Access: Region 1 was higher than Regions 3 and 4.
- Family Involvement: Region 3 was less than Regions 1, 4, 5, and 6.

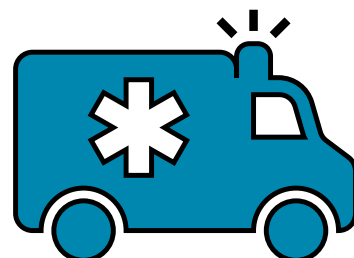

Awareness of Peer Provided Services

"Very helpful agency. Helped us so much in understanding my daughter and helping her understand her depression and severe anxiety. She is a totally different person in the best way ever." Caregiver

89.1% of youth caregivers reported that it was important to have a *Crisis Response Team* meet them in their home or community versus going to a type of Behavioral Health Crisis or Urgent Care setting.

Crisis Response

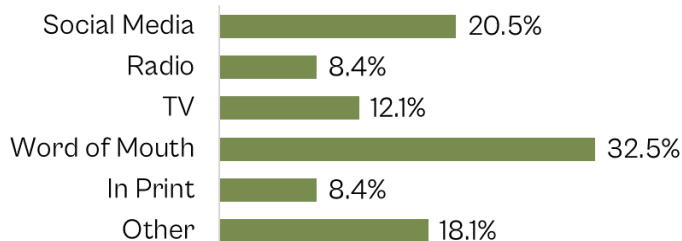

988 Awareness

28.7%

of youth caregivers reported they were aware of the 988 behavioral health emergency line.

How They Heard About 988

"We are very thankful for the team our son has. To see our son thriving is really great to see. Without help for our son and family I don't think he would be doing as well as he is today. We are forever grateful!" Caregiver

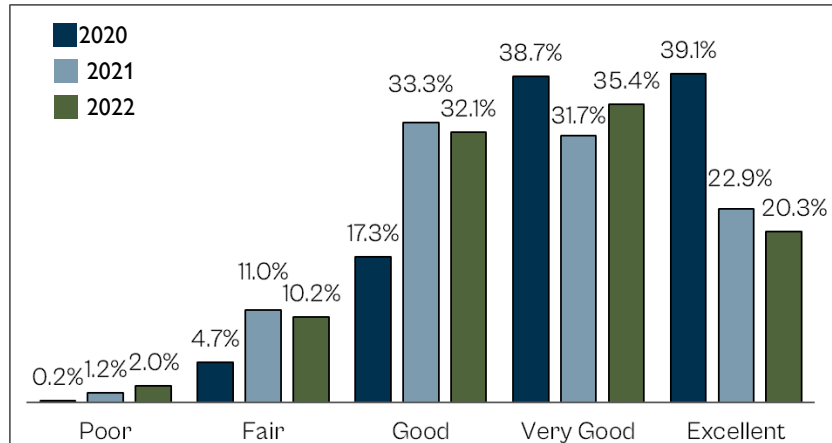

77.0% of youth caregivers reported that they were likely or very likely to call a three-digit number of they or a loved one were experiencing a mental health or substance use emergency.

Likely to Call 988 Line

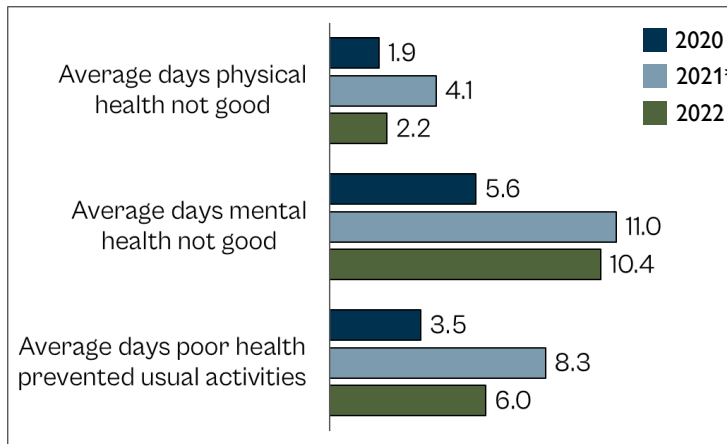

Self Rated Health

For FY 2022, a majority (55.7%) of youth caregivers reported that their child had very good or excellent health. Similarly, there were relatively few caregivers who reported that their child had poor (2.0%) or fair (10.2%) health.

Unhealthy Days

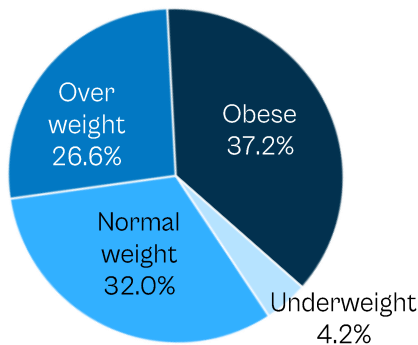

For FY 2022, 39.4% of youth caregivers reported that their child had at least one physically unhealthy day. In contrast, 85.8% reported that their child had at least one mentally unhealthy day. Among responding youth caregivers, 58.7% reported that their child had at least one day on which poor health inhibited their usual activities.

Appendix A: Adult & Youth Questionnaires

Adult Survey Questions¹ and MHSIP Scales

Items from the MHSIP Adult Survey were grouped into five scales or “domains”. The grouping of the items into the five domains is consistent with the groupings required for the National Center for Mental Health Services’ Uniform Reporting System. Below are the five domains and the survey questions included in each domain.

Access

1. The location of services was convenient (parking, public transportation, distance, etc.).
2. Staff were willing to see me as often as I felt it was necessary.
3. Staff returned my call within 24 hours.
4. Services were available at times that were good for me.
5. I was able to get all the services I thought I needed.
6. I was able to see a psychiatrist when I wanted to.

Quality and Appropriateness:

1. I felt free to complain.
2. I was given information about my rights.
3. Staff encouraged me to take responsibility for how I live my life.
4. Staff told me what side effects to watch out for.
5. Staff respected my wishes about who is and who is not to be given information about my treatment.
6. Staff here believe that I can grow, change and recover.
7. Staff were sensitive to my cultural background (race, religion, language, etc.).
8. Staff helped me obtain the information I needed so that I could take charge of managing my illness.
9. I was encouraged to use consumer-run programs like support groups, drop-in centers, crisis phone lines, etc.

Outcomes:

As a direct result of the services I received:

1. I deal more effectively with daily problems.
2. I am better able to control my life.
3. I am better able to deal with crisis.
4. I am getting along better with my family.
5. I do better in social situations.
6. I do better in school and/or work.
7. My housing situation has improved.
8. My symptoms are not bothering me as much.

Participation in Treatment Planning:

1. I felt comfortable asking questions about my treatment and medication.
2. I, not the staff, decided my treatment goals.

General Satisfaction:

1. I like the services I received here.
2. If I had other choices, I would still get services from this agency.
3. I would recommend this agency to a friend or family member.

Two additional domains (and the questions included in each) have been included since the 2011 survey.

¹ Possible responses: strongly agree, agree, neutral, disagree, strongly disagree and not applicable.

Appendix A: Adult & Youth Questionnaires

Functioning

As a direct result of the services I received:

1. My symptoms are not bothering me as much.
2. I do things that are more meaningful to me.
3. I am better able to take care of my needs.
4. I am better able to handle things when they go wrong.
5. I am better able to do things that I want to do.

Social Connectedness

1. I am happy with the friendships I have.
2. I have people with whom I can do enjoyable things.
3. I feel I belong in my community.
4. In a crisis, I would have the support I need from family or friends.

Youth Survey Questions and MHSIP Scales

Satisfaction:

1. Overall, I am satisfied with the services my child received.
2. The people helping my child stuck with us no matter what.
3. I felt my child had someone to talk to when he/she was troubled.
4. The services my child and/or family received were right for us.
5. My family got the help we wanted for my child.
6. My family got as much help as we needed for my child.

Positive Outcome:

As a result of the services my child and/or family received:

1. My child is better at handling daily life.
2. My child gets along better with family members.
3. My child gets along better with friends and other people.
4. My child is doing better in school and/or work.
5. My child is better able to cope when things go wrong.
6. I am satisfied with our family life right now.

Cultural Sensitivity:

1. Staff treated me with respect and dignity.
2. Staff respected my family's religious/spiritual beliefs.
3. Staff spoke with me in a way that I understood.
4. Staff were sensitive to my cultural/ethnic background.

Access:

1. The location of services was convenient for us.
2. Services were available at times that were convenient for us.

Family Involvement:

1. I helped to choose my child's services.
2. I helped to choose my child's treatment goals.
3. I participated in my child's treatment.

Appendix A: Adult & Youth Questionnaires

Improved Functioning

As a result of the services my child and/or family received:

1. My child is better at handling daily life.
2. My child gets along better with family members.
3. My child gets along better with friends and other people.
4. My child is doing better in school and/or work.
5. My child is better able to cope when things go wrong.
6. My child is better able to do the things he/she wants to do.

Social Connectedness

1. I know people who will listen and understand me when I need to talk.
2. I have people that I am comfortable talking with about my child's problems.
3. In a crisis, I have the support I need from family or friends.
4. I have people with whom I can do enjoyable things.

Calculation of Survey Scale Scores

A multistep process was used to calculate survey domain scores.

1. Respondents with more than one-third of the items in the scale either missing or marked "not applicable" were excluded.
2. For those respondents remaining, an average score for all items in the scale was calculated.
3. For each scale, the number of average scores from Step 2 that were 2.49 or lower were counted (scores that, when rounded, represent "Agree" or "Strongly Agree" responses).
4. For each scale, the count from Step 3 was divided by the count of "remaining" records from Step 1 to obtain a percentage of positive responses.

For example, when reviewing 2022 data, results indicated that of the 872 eligible Adult Surveys, 24 surveys were missing responses or marked "not applicable" for more than one-third of the items in the Access domain. Those 24 surveys were excluded from the calculation, leaving 858 surveys to be included in the calculation. Average domain scores were calculated for each of the 858 surveys. Of those surveys, 723 had average scores of 2.49 or lower (agree/strongly agree); 98 had average scores between 2.50 and 3.49 (neutral); and 37 had average scores of 3.50 or higher (disagree/strongly disagree). Therefore, the percent of positive responses for the Access domain is calculated as being 723 positive responses divided by 858 surveys with completed access items, or 84.3%.
