Attn: Technical Review Committee, Board of Health, and Dr. Anthone

My name is Eric Barber, and I am the President and CEO of Mary Lanning Healthcare. I am writing to urge you to recommend against the licensing of Anesthesiologist Assistants (AAs) in Nebraska. It is vitally important to Nebraska rural hospitals to maintain health care services in our local communities. These facilities serve to stabilize trauma patients for transfer, deliver babies, perform routine procedures and surgeries, and provide lifesaving care during a pandemic. Rural hospitals are not only a lifeline for patients, but for the entire community.

CRNAs provide the majority of anesthetic care in Nebraska and 100% of the anesthetics delivered at critical access hospitals. Currently, approximately 64,000 CRNAs practice in the United States in both rural and urban settings.

Anesthesiologists Assistants (AAs) were first introduced in Ohio and Georgia over 40 years ago. To date there are approximately 3,000 in the United States. They reside primarily in Ohio, Georgia, and Florida. An AA may not work without being directly supervised by a physician anesthesiologist. This requires the direct on-site physical presence of a physician anesthesiologist at all times. Consequently, AAs are a nonfactor in alleviating patient access to care issues.

Nebraska should prioritize educating, recruiting, and retaining independently licensed CRNAs and physicians to ensure continued quality and access to care. AAs are not the answer to the healthcare shortage in the immediate future. In fact, introducing AAs in Nebraska will only further exacerbate the shortage of our independent providers. Rural hospitals depend on CRNAs to keep their doors open by providing quality, cost-effective care.

Licensure of AAs would be bad for Nebraska because:

- They cannot practice independently.
- They increase cost.
- They do not improve patient access to anesthesia services.

We urge you to recommend AGAINST licensure of Anesthesiologist Assistants.
