To whom it may concern,

I am writing to express my full support for the inclusion of nurse practitioners (NPs) in the utilization of fluoroscopy after the proposed training requirements. As a practicing radiologist with extensive experience in fluoroscopic procedures, I believe that NPs, when properly trained, can play a vital role in enhancing patient care while maintaining high safety standards in imaging procedures.

Fluoroscopy is a critical diagnostic and therapeutic tool that enables real-time imaging for various procedures, such as joint injections, catheter placements, and other minimally invasive interventions. The integration of NPs into this process can improve accessibility and streamline workflow, ultimately benefiting both patients and healthcare providers and improving access to specialty care in rural communities.

I have been informed of the concerns regarding fluoroscopy being used in “medical spas” and do not see this as a risk of public harm as the current Radiation Control Act provides protection from unregulated/unregistered radiation generating equipment.

I look forward to collaborating with nurse practitioners in the continued effort to improve patient care, enhance procedure efficiency, and optimize the use of fluoroscopy in a safe and responsible manner. Please do not hesitate to reach out if you have any further questions or if I can provide additional information regarding this matter.

Thank you for your attention to this important issue.

Sincerely,

**Michael Yung, MD**
