APPENDIX A –SFY 2024 OUTPATIENT EAPG VERSION UPDATE MODELING SUMMARIES	

Overview

The Nebraska Department of Health and Human Services (DHHS) engaged Milliman to assist with updating its Medicaid managed care outpatient hospital Enhance Ambulatory Patient Groups (EAPG) grouper version and weights effective **July 1, 2023**. DHHS's Medicaid outpatient EAPG payment methodology has been effective in the Nebraska Medicaid Heritage Health managed care program since January 1, 2020. DHHS has not adopted the EAPG methodology for outpatient payment under the State's Medicaid fee-for-service (FFS) program and does not plan to do so at this time. This report describes the results, methodology, and data sources relied upon for modeling of EAPG grouper version and weight updates. The terms of Milliman's contract with DHHS signed on June 17, 2021, apply to this report and its use.

SFY 2024 EAPG payment modeling included the following updates:

- Updating the EAPG patient classification system to version 3.18 (from the current EAPG version 3.14)
- Updating the Nebraska EAPG relative weights to be based on 3M™ EAPG version 3.18 national weights, normalized to result in the same aggregate modelled payments as the current EAPG grouper version and weights
- Incorporating new providers into the EAPG payment modelling and the current peer groups (Children's, Metro, Rehab, Rural, Surgical, and Urban hospitals)
- Assigning two new service-level policy adjustors for EAPG version 3.18 Rehabilitation and Chemotherapy and Pharmacotherapy service lines to increase the relative weights for these services.

Per DHHS's direction, SFY 2024 EAPG payment modeling did not reflect other changes to the current Nebraska EAPG payment methodology or EAPG base rates. ***Similarly, this modeling is conducted using SFY 2023 provider EAPG base rates to isolate for the net payment impacts from updating to EAPG version 3.18. We understand that actual EAPG base rates to be used for SFY 2024 outpatient hospital payments by Nebraska Medicaid managed care organizations (MCOs) will reflect a 3% increase appropriated by the Nebraska State legislature. This report does not include rate calculations or estimated payment impacts for outpatient services and providers carved out of the EAPG payment methodology, including reimbursement for outpatient services provided by Critical Access Hospitals and out-of-state non-participating providers with less than \$35,000 in Medicaid MCO payments during Calendar Year (CY) 2021, as well as outpatient COVID-19 testing or treatment services provided by all hospitals.***

The SFY 2024 EAPG payment modeling described in this report reflects the following changes from the prior model version described in the Milliman report "Preliminary SFY 2024 Medicaid EAPG Version Update Modeling" dated April 18, 2023:

- Based on stakeholder feedback from both hospitals and MCOs, at DHHS' direction we included two new service-level policy adjustors for EAPGs to mitigate the negative payment impact from transitioning to EAPG version 3.18:
 - EAPGs within the version 3.18 **Rehabilitation service line** (based on 3M crosswalking) have a modelled service policy adjustor of **1.20**. This is layered on top of the existing Physical Therapy and Rehab (EAPG Type 21) scaling adjustment of 0.50 that is applied to a subset of the Rehabilitation service line EAPGs.
 - EAPGs within the version 3.18 **Chemotherapy and Pharmacotherapy service line** (based on 3M crosswalking) have a modelled service policy adjustor of **1.10**. There are no other policy adjustors applied to EAPGs within this service line.

OUTPATIENT EAPG PAYMENT PARAMETERS

Key payment policy parameters for DHHS's current outpatient EAPG payment methodology, based on information provided by DHHS (referenced later in this report), are summarized in Figure 1 below.

FIGURE 1 – NEBRASKA OUTPATIENT EAPG PAYMENT PARAMETERS

EAPG Methodology Parameter	Current Methodology	DHHS Proposed Rate Update
EAPG Grouper	Nebraska Heritage Health plans currently use 3M™’s EAPG Grouper version 3.14 for SFY 2023 outpatient Medicaid managed care claims, which contains 574 EAPGs.	DHHS proposes to update to EAPG version 3.18, which has 666 total EAPGs.
Peer Group EAPG Base Rates	<p>The Peer Group Base Rate is the hospital EAPG base rate used in DHHS’s calculation of the EAPG payments. The current SFY 2023 Peer Group Base Rates are based on rates effective since July 1, 2020 and are updated by DHHS annually according to adjustment percentages established by the legislature.</p> <p>The SFY 2023 Peer Group Base Rate is the same for all hospitals in each of the following peer groups included in the EAPG payment methodology:</p> <ul style="list-style-type: none"> ▪ Children’s Hospitals ▪ Metro Hospitals ▪ Rehab Hospitals ▪ Rural Hospitals ▪ Surgical Hospitals ▪ Urban Hospitals 	DHHS proposes maintaining the current EAPG Peer Groups and updating Peer Group Base Rates by applying 3% base rate increases appropriated by the Nebraska Legislature. SFY 2024 EAPG payment modeling was based on the current SFY 2023 EAPG base rates to isolate the impact of transitioning between EAPG version 3.14 and version 3.18.
EAPG Relative Weights	DHHS currently uses 3M™’s EAPG version 3.14 national relative weights for SFY 2023 Medicaid managed care encounter claims, without scaling or other adjustments.	DHHS proposes to update to 3M™ EAPG version 3.18 national weights normalized to modeled case mix under the current version 3.14 EAPG classifications and national EAPG version 3.14 relative weights.
EAPG Policy Adjustors	<p>DHHS currently applies certain policy adjustors to adjust the version 3.14 EAPG weights for select Medicaid service lines.</p> <ul style="list-style-type: none"> ▪ Physical Therapy and Rehab (EAPG Type 21) – a 50% scaling adjustment to align national weights with acute services and legacy payment levels ▪ Mental Health and Counseling (EAPG Type 22) – a 25% scaling adjustment to align national weights with acute services and legacy payment levels ▪ Behavioral Health and Substance Abuse Therapies (EAPG Category 16) – a 102% adjustor enhances line level payment for services provided by a hospital with a behavioral health provider designation ▪ Non-Emergency services provided in an emergency department – a 50% discount for non-Emergency services provided in an emergency department 	<p>DHHS proposes maintaining the current policy adjustment factors in addition to incorporating two new service adjustors:</p> <ul style="list-style-type: none"> ▪ EAPG version 3.18 Rehabilitation service line: a 120% (factor of 1.20) policy adjuster is applied to EAPG relative weights in this service line to mitigate negative payment impacts (which is layered on top of the existing EAPG Type 21 scaling adjustment that is applied to a subset of the Rehabilitation service line EAPGs) ▪ EAPG version 3.18 Chemotherapy and Pharmacotherapy service line: a 110% (factor of 1.10) policy adjuster is applied to EAPG relative weights in this service line to mitigate negative payment impacts <p>These service adjustors have been applied to the modeled weights for these EAPGs, and as such will not require a change to payment processing logic.</p>

EAPG Methodology Parameter	Current Methodology	DHHS Proposed Rate Update
Charge Cap	DHHS applies a charge cap at the claim header level so that outpatient encounter claim allowed amounts are reduced to submitted header level charges. Any applicable payment reductions in header-level payment are distributed across all paid lines.	DHHS does not propose any changes in the calculation or application of the charge cap.
EAPG Carve-outs	<p>The following services are carved-out of the EAPG payment system and paid under a separate methodology:</p> <ul style="list-style-type: none"> ▪ Procedure codes present on DHHS's COVID-19 fee schedule published on January 26, 2023 ▪ Services provided by Critical Access Hospitals (CAHs) and out-of-state non-participating providers with less than \$35,000 in Medicaid MCO payments during Calendar Year (CY) 2021 	DHHS does not propose changes to the list of carve-out EAPG services and providers, or how these services are reimbursed.

MODELED PAYMENT IMPACTS

SFY 2024 EAPG payments under EAPG version 3.18 have been modeled to reflect the impact of transitioning from EAPG version 3.14 to EAPG version 3.18, while scaling the EAPG version 3.18 national weights to maintain the same casemix as the EAPG version 3.14 weights in the model data set. At DHHS's direction, this transition was modeled using SFY 2023 EAPG base rates to isolate the payment impact from transitioning from EAPG version 3.14 to EAPG version 3.18. In aggregate there is a very small estimated payment impact from this transition of +\$33,209, representing a 0.0% change. There are however larger modeled EAPG payment impacts for specific services, providers, and populations, as discussed later in this report. As mentioned previously, we understand that actual SFY 2024 outpatient hospital payments by Nebraska Medicaid MCOs will reflect a 3% EAPG base rate increase appropriated by the Nebraska State legislature. See the "Results" section of this report and **Appendix A** for more information on estimated EAPG payment impacts.

Results

The modeled SFY 2024 EAPG version and weight update results are described below. **Actual payments under EAPG version and weight updates will differ from the simulated payments in this modeling. Reasons for differences include but are not limited to payments using SFY 2024 EAPG base rates (which we understand will incorporate a 3% increase appropriated by the Nebraska State legislature), rate negotiations between MCOs and hospitals, as well as future changes in enrollment, outpatient service utilization and service mix, hospital documentation and coding, hospital chargemasters, COVID-19 impacts, and other factors.**

OUTPATIENT EAPG GROUPER AND WEIGHT UPDATES

DHHS proposes to update to EAPG version 3.18, which has 666 total EAPG classifications. Compared to the current EAPG version 3.14, 74 EAPGs have been deleted and 166 new version 3.18 EAPGs have been added, resulting in a net increase of 92 EAPGs. These changes have occurred between EAPG version 3.14 and EAPG version 3.18 with additions, deletions, and other refinements in the EAPG grouping logic occurring in each successive version update between EAPG version 3.14 and EAPG version 3.18. Generally, EAPG classifications have become more granular with each successive version update. See **Appendix A** for a comparison of EAPG version 3.14 and version 3.18 EAPGs and weights.

To evaluate the impact of updating from EAPG version 3.14 to EAPG version 3.18, we assigned version 3.14 and 3.18 EAPG classifications to calendar year (CY) 2021 Nebraska Medicaid managed care encounter claim detail lines using the 3M™ Grouper Plus Content Services (GPCS) grouper software. We then used the EAPG grouper output, Nebraska EAPG payer logic, and 3M™ national relative weights to calculate composite case mix under both EAPG version 3.14 and 3.18. Case mix represents the average level of acuity for a given set of historical experience and is calculated by dividing the sum of the EAPG relative weights (assigned to CY 2021 outpatient model encounter claims data based on the EAPG assignment) by the number of CY 2021 model outpatient visits.

Per 3M™ in its version 3.18 EAPG documentation, 3M™ provides the following information related to the development and recommended scaling of version 3.18 EAPG national relative weights:¹

The EAPG weight calculation utilizes 106 million CY2021 CMS OPSS claims to provide estimates of the relative resource use required by each EAPG category. While variation exists in the frequency of procedures and visit types between Medicare, Medicaid, and Commercially insured populations, we have observed that relative resource use between EAPGs is highly consistent.

Despite consistent relative resource use, and thereby weight, variation in the mix of procedures and visit types means that the average resource consumption across patients varies considerably across these patient populations. The result is that the set of relative weights created to match the cost and spending pattern of the OPSS data, and hence Medicare FFS population, spends a different average amount when applied to the mix of services associated with Medicaid or Commercial populations.

Care must therefore be taken to scale (up or down) the relative weights provided within the calculation to fit the average spend of the target population. Moreover, while care is taken each year to provide weights relative to the average Medicare per encounter spend within the OPSS (thus accounting for cost inflation experienced by CMS), it does not account for annual mix changes experienced within the Medicare program that may increase or decrease the average.

At DHHS's direction and consistent with 3M™ guidance, we scaled (or "normalized") the case mix under EAPG version 3.18 national relative weights. Normalizing the EAPG weights involves the application of a statewide adjustment factor to the EAPG version 3.18 national weights to achieve a target aggregate modeled case mix under EAPG version 3.18 that is equal to the aggregate modeled case mix under EAPG version 3.14. Normalizing the national weights allows for consistent aggregate case mix when updating EAPG versions and reduces volatility in changes in EAPG base rates when updating grouper versions. For modeled case mix under EAPG version 3.18, we calculated a normalization factor of 1.08612065 such that the aggregate case mix and weights are equal under EAPG versions 3.14 and 3.18. Results from the weight normalization calculations are summarized in Figure 2, below.

FIGURE 2 - MODELED EAPG CASE MIX AND NORMALIZATION FACTORS

¹ 3M, "grp140_eapg_v3.18_soc.pdf", downloaded from the 3M™ Core Grouping Software licensed user site.

Metric (Using CY 2021 Model Data)	Modeled EAPG v3.14 Total	Modeled EAPG v3.18 Total (without scaling)	Modeled EAPG v3.18 Total (with scaling)
Modeled CY 2021 EAPG Weights	263,262.71	242,388.09	263,262.71
Normalization Factor	1.0000	1.0000	1.08612065

BASE RATES

SFY 2024 EAPG payment modeling was based on the current SFY 2023 EAPG base rates to isolate for the impacts caused by transitioning from EAPG version 3.14 to EAPG version 3.18. Current peer group base rates relied upon for SFY 2024 EAPG payment modeling are shown in Figure 3 below.

FIGURE 3 – MODELED PEER GROUP RATE UPDATES

Peer Group	SFY 2023 Peer Group Base Rate
Children's Hospitals	\$1,075.04
Metro Hospitals	\$771.04
Rehab Hospitals	\$924.73
Rural Hospitals	\$1,058.04
Surgical Hospitals	\$424.41
Urban Hospitals	\$877.81

See **Appendix A** for proposed rate update calculations across hospitals.

PAYMENT SIMULATION AND ESTIMATED PAYMENT IMPACTS

To evaluate the hospital EAPG version and weight update payments impacts, we summarized the following metrics for the outpatient EAPG payment simulation model, using CY 2021 Medicaid hospital managed care encounter data:

- *CY 2021 Model Encounters:*
 - Number of CY 2021 Medicaid visits assigned by the EAPG grouper and paid encounter claim lines from the managed care encounter claims data for participating hospitals (excluding CAHs and providers with less than \$35,000 in Medicaid MCO paid amounts in CY 2021 encounter data received during the fall of 2022) and major acute border hospitals, excluding EAPG carve out services from the Nebraska Medicaid COVID-19 fee schedule, denied claim lines, encounter claim lines with dual eligible categories of aid, lines with plan-assigned error EAPGs, and encounter claims with version 3.14 or version 3.18 error EAPGs across all encounter claim lines within an encounter claim. See the "Data Source" section for more details on model claims data relied upon.
- *Simulated Payments Under Current EAPG Version 3.14 Classification and Weights:*
 - EAPG weights and case mix under current EAPG grouper version, equal to the sum of current DHHS weights using EAPG version 3.14 divided by the number of visits. Case mix indicates the average relative resource requirements for a set of hospital experience (e.g., the average relative resource requirements for all services from a given hospital).

- Simulated payments under current EAPG version 3.14 weights. Outpatient EAPG summaries include calculated payments based on the pricing formulas in the current Nebraska Medicaid EAPG Pricing Calculator using SFY 2023 EAPG base rates.
- *Simulated Payments Under Modeled EAPG Version 3.18 Classification and Weights*
 - EAPG scaled weights and case mix under the new EAPG version 3.18 grouper, equal the sum of the updated normalized budget neutral weights divided by the number of visits.
 - Simulated payments under proposed EAPG version 3.18 weights. Outpatient EAPG summaries include calculated payments based on the pricing formulas in the current Nebraska Medicaid EAPG Pricing Calculator, using SFY 2023 EAPG base rates and EAPG v3.18 scaled national weights (including the new proposed policy adjusters for the Rehabilitation and Chemotherapy and Pharmacotherapy EAPG service lines).
- *Estimated Impact*
 - Modeled payment change, equal to total simulated payments under proposed EAPG weights using SFY 2023 base rates minus simulated payments under current EAPG weights and SFY 2023 base rates.
 - Modeled payment change percentage, equal to modeled payment change divided by the simulated payments under current EAPG weights with SFY 2023 base rates.

See **Appendix A** for proposed EAPG version and weight update calculations across hospitals. Key drivers of estimated payment impacts from EAPG version and weight updates include the following:

- *Changes in EAPG weights:* While the EAPG version 3.18 weights are normalized to maintain the aggregate sum of weights and aggregate case-mix relative to the version 3.14 EAPG grouper, there are changes in service-level EAPG weights that impact payments across specific services, providers, and populations.
- *Changes in EAPG classifications:* 3M™ changes under EAPG version 3.15 to the assignment of EAPG 271 (Physical Therapy) carried forward to version 3.18 and resulted in a decrease in modeled payments for EAPG Service Line “6 – Rehabilitation services”. Changes in EAPG assignments impact the relative weights and policy adjusters used for claim line payments between EAPG version 3.14 and EAPG 3.18 modeling.

Methodology

Our approach for SFY 2024 EAPG payment modeling is described in the steps below.

STEP 1: DEVELOPED EAPG VERSION AND WEIGHT UPDATE MODEL CLAIMS DATASETS

To model payment impacts for the EAPG weight updates, we used Medicaid outpatient paid MCO encounter data with CY 2021 service end dates received from Nebraska managed care Special Feeds data submitted to DHHS from the Heritage Health plans in the fall of 2022 and spring of 2023. We created an extract, transform, and load (ETL) process on the datasets from each plan prior to encounter claim selection. Outpatient hospital encounter claims from each plan were selected based on the claim type code, type of service code, and bill type present on each encounter and incorporated into a single dataset.

All claim lines were processed through the EAPG grouper using the 3M™ GPCS software and existing Nebraska EAPG settings and payer exceptions for EAPG versions 3.14 and 3.18. Grouper settings for EAPG version 3.14 were mapped to EAPG version 3.18, without changing settings between versions, to maintaining the same methodology as when EAPG rates were initially developed. For EAPG version 3.18 3M™ discontinued the use of the EAPG inpatient only list and we did not apply the EAPG version 3.14 inpatient only list during the EAPG version 3.18 grouping.

Following grouping, we made exclusions at both the encounter claim header level and at the encounter claim line level to exclude encounter claims that had error or null EAPGs on all claim lines, encounter claims that had Medicare payment amounts greater than \$0, encounter lines with dual eligible categories of aid, or encounter claims with only denied lines. We made additional exclusions at the claim line level to remove any lines assigned an error or null EAPG by a Heritage Health plan. Our analysis also excluded all encounter claim lines with a procedure code listed on the January 26, 2023 COVID-19 fee schedule or in the Nebraska EAPG calculator, hospitals for out-of-state non-critical border hospitals not listed in the Nebraska EAPG calculator that had Medicaid MCO payment amounts less than \$35,000, voided claims, and non-final action claims after the assignment of EAPG version 3.14 and 3.18 EAPGs.

Using this data, we conducted the following steps:

- Merged 3M™ EAPG information for EAPG versions 3.14 and 3.18 based on assigned EAPG, including EAPG v3.14 and EAPG v3.18 relative weights.
- Merged peer group base rates, based on provider Medicare ID. In instances where new providers were incorporated into the EAPG payment methodology we assigned the appropriate peer group base rate for each new provider based on DHHS guidance. In cases where plan reported Medicaid IDs did not align to the Nebraska EAPG calculator or EAPG peer group base rate file, we used a provider NPI to Medicaid ID crosswalk provided by DHHS to assign a provider Medicaid ID and Medicare ID.
- Attached COVID-19 fee schedules to identify encounter claim lines for COVID-19 service exclusion.
- Assigned MCO specific emergency diagnosis code lists to each plan's encounter claims using submitted diagnosis codes.

STEP 2: SIMULATED PAYMENTS UNDER CURRENT AND UPDATED EAPG VERSION AND WEIGHTS

For each claim detail line in our outpatient EAPG version update model dataset, we simulated the EAPG payments before and after the EAPG grouper version update using the pricing formulas present in the current Nebraska EAPG payment calculator, consistent with the factors documented in Figure 1. For EAPG version 3.18 we incorporated the policy adjusters for the new proposed Rehabilitation and Chemotherapy and Pharmacotherapy EAPG service lines into the payment modeling to increase the weights for these EAPGs. For the modeling of EAPG version 3.18 weights we applied the 3M™ EAPG version 3.18 national weights, with adjustments only for the Rehabilitation and Chemotherapy and Pharmacotherapy service lines. Note that we embedded these new policy adjusters into the relative weights for these two EAPG service lines; as such, no changes to the pricing logic was required.

In addition, we reviewed EAPG assignment for EAPG version 3.14 to confirm that EAPGs and EAPG payments generally matched what was assigned by the MCOs. We did not exclude claim lines or claims where we could not reconcile EAPG assignments or EAPG payments as MCOs may make additional adjustments for EAPG assignments or reimbursements based on specific contracting terms between individual hospitals and MCOs.

STEP 3: WEIGHT NORMALIZATION UPDATES

To normalize the EAPG version 3.18 national weights, we developed a factor to apply to the EAPG version 3.18 national relative weights produced and published by 3M™ such that the modeled normalized sum of the weights and

case mix under EAPG version 3.18 equaled modeled sum of the weights and case mix under EAPG version 3.14 on a statewide basis, with all policy adjusters included as modeled in step 2.

For the weight normalization process the total EAPG version 3.18 weights are determined first without a scaling adjustment applied and are then used to calculate the final scaling factor for the Nebraska EAPG version 3.18 weights.

STEP 4: APPLIED WEIGHT SCALING TO MODEL PAYMENTS

To calculate the final model claim payments, we applied the weight scaling factor calculated in step 3 to the relative weights assigned in step 2. We then used these Nebraska specific EAPG version 3.18 normalized weights with Nebraska EAPG v3.18 payment logic to calculate model claim payments.

STEP 5: SUMMARIZED MODEL RESULTS

We summarized the simulated payments under the proposed EAPG version 3.18 grouper and weight update to evaluate the modeled fiscal impacts compared to simulated payments under the current EAPG version 3.14 grouper and weights.

Our weight update model summaries, as shown in the exhibits in **Appendix A**, include the following metrics described previously in the “Results” section of this report by the following breakouts:

- EAPG version 3.18 Weight Scaling Summary, which demonstrates the calculation of the normalization factor shown in Figure 2
- Summary of model base rates and peer groups by provider
- Payment Impact Summary by Provider
- Payment Impact Summary by Provider Peer Group
- Payment Impact Summary by 3M™ EAPG version 3.18 Service Line (based on the 3M™ EAPG-to-service line crosswalk)
- Payment Impact Summary by 3M™ EAPG version 3.18 Service Line (based on the 3M™ EAPG-to-service line crosswalk), with encounter claim lines assigned to the service line with the highest weighted EAPG on the encounter claim
- Payment Impact Summary by 3M™ EAPG version 3.18 Service Type (based on the 3M™ EAPG-to-service type crosswalk)
- Payment Impact Summary by 3M™ EAPG version 3.18 Service Type (based on the 3M™ EAPG-to-service type crosswalk), with encounter claim lines assigned to the service type with the highest weighted EAPG on the encounter claim
- Payment Impact Summary by line level EAPG assigned under for EAPG version 3.18 and EAPG version 3.14
- Payment Impact Summary by line level EAPG assigned under for EAPG version 3.18 and EAPG version 3.14 for all EAPGs in EAPG version 3.17 Service Line 36 – Chemotherapy and Pharmacotherapy
- Nebraska EAPG version 3.14 and version 3.18 grouper settings

Data Sources and Assumptions

The data sources relied upon for SFY 2024 EAPG payment modeling are described as follows.

CURRENT DHHS OUTPATIENT HOSPITAL EAPG PEER GROUP RATES AND WEIGHTS

We relied on the Nebraska SFY 2023 EAPG base rate PDF file downloaded from the Nebraska Medicaid Provider Rates and Fee Schedules website as the source for the current peer group EAPG base rates.² We understand that the current peer group base rates were developed by Nebraska's prior contractor for hospital rate development services. For new providers, we relied on guidance from DHHS and the Medicare federal fiscal year 2023 inpatient prospective payment system (IPPS) public use file (PUF) to assign peer groups and base rates to new providers. We also relied upon the Nebraska EAPG Pricing Calculator dated July 6, 2020, downloaded from the Nebraska Heritage Health Resources website, as the basis for the current EAPG version 3.14 weights.³ We have relied upon these key sources without audit, but we reviewed them for reasonableness.

CURRENT DHHS OUTPATIENT HOSPITAL EAPG PRICING METHODOLOGY

To replicate the current EAPG pricing methodology used by Nebraska Heritage Health plans, Milliman relied upon the following:

- Methodology and pricing formulas included in the Nebraska Medicaid EAPG Pricing Calculator dated July 6, 2020
- Nebraska Medicaid EAPG Pricing Training from May 2020⁴
- ICD-10 diagnosis codes and assignment logic provided by each Heritage Health plan to identify non-emergent services provided in an emergency department subject to a payment discount under Nebraska Medicaid policy. This information was provided to Milliman by DHHS on March 15, 2023.
- CMS Market Basket dataset, published on the CMS website and dated April 20, 2023, used to calculate an inflation factor to apply to submitted header level claim charges for modeling the impact of the EAPG charge cap⁵

3M™ GROUPEX PLUS CONTENT SERVICES (GPCS) SOFTWARE OUTPUT

We relied on the 3M™ GPCS software to assign version 3.14 and 3.18 EAPGs to CY 2021 Medicaid outpatient managed care encounter data for modeling purposes. We relied on EAPG grouper settings provided 3M™ through their existing core grouping software (CGS) and Nebraska Payer Exceptions lists for these EAPG assignments. We relied on accurate information from 3M™ and accurate processing by the 3M™ software. We reviewed the EAPG assignments for reasonableness but did not audit them.

3M™ NATIONAL WEIGHTS

We relied upon the EAPG version 3.18 national weights ("EAPG_3.18_nat_wts.xlsx") file downloaded from the 3M™ Core Grouping Software licensed user site.

NEBRASKA MEDICAID HOSPITAL MCO ENCOUNTER DATA

DHHS provided Milliman with Medicaid outpatient hospital MCO Special Feeds encounter data submitted to DHHS through the fall of 2022 and in the spring of 2023 for use in these analyses. We relied upon claims and encounters with CY 2021 service end dates, with the exclusions described previously in the methodology section. We reviewed the provided data for reasonableness, but we did not audit the data provided by DHHS and the MCOs.

NEBRASKA NPI TO PROVIDER MEDICAID ID CROSSWALK

To combine encounter claims information from each MCO into summaries by provider, we requested that each MCO include the DHHS assigned Nebraska Hospital Medicaid ID on each encounter claim line. In some cases, the Medicaid IDs provided by Heritage Health plans did not match against the Medicaid IDs listed in the Nebraska

Medicaid EAPG Pricing Calculator. In these cases, Milliman used an NPI to hospital Medicaid ID provider crosswalk, provided by DHHS on November 28, 2022, to assign the appropriate Nebraska Medicaid ID to each provider.

Caveats and Limitations

The terms of Milliman's contract with the Nebraska Department of Health and Human Services (DHHS) signed on June 17, 2021, apply to this report and its use.

This report contains information produced, in part, using the 3M™ Grouper Plus Content Services and Enhanced Ambulatory Patient Groups (EAPGs), which is proprietary computer software created, owned and licensed by 3M™ Company. All copyrights in and to the 3M™ Software are owned by 3M™ Company or its affiliates. All rights reserved.

The Medicaid hospital EAPG version and weight update modeling described in this report is for modeling purposes only and subject to change based on actual payments from Nebraska MCOs using SFY 2024 EAPG base rates. Readers should reference DHHS's Nebraska Heritage Health website and appropriate 3M™ EAPG documentation to understand the appropriate use of the information presented; this report should not be considered complete without the reader's reference to those documents.

We understand that this report will be shared with Nebraska Medicaid hospitals, the Nebraska Hospital Association, Nebraska Medicaid Heritage Health plans, and the State's Medicaid capitation rate setting vendor. To the extent that the information contained in this analysis is provided to any approved third parties, the correspondence should be distributed in its entirety. Any user of the data must possess a certain level of expertise in health care finance and policy that will allow appropriate use of the data presented.

Milliman makes no representations or warranties regarding the contents of this report to third parties. Likewise, third parties are instructed that they are to place no reliance upon this analysis prepared for DHHS by Milliman that would result in the creation of any duty or liability under any theory of law by Milliman or its employees to third parties.

Milliman has developed certain models to estimate the values included in this report. The intent of the models is to estimate payments for hospital outpatient encounter claims for informational purposes when updating the EAPG version and relative weights for Medicaid managed care payment purposes. We have reviewed the models, including their inputs, calculations, and outputs for consistency, reasonableness, and appropriateness to the intended purpose.

We have relied upon certain data and information provided by CMS, 3M™, DHHS, and Heritage Health plans, in our analysis and have accepted these data and information without audit. To the extent that the data and information provided is not accurate, or is not complete, the values provided in this analysis may likewise be inaccurate or incomplete.

Milliman's data and information reliance includes the items outlined in the Data Sources and Assumptions section of this report. The models, including all input, calculations, and output may not be appropriate, and should not be used, for any other purpose.

Differences between our modeled amounts and actual amounts depend on the extent to which future experience conforms to the assumptions made for these analyses. Future results may change from these estimates due to a number of factors, including final DHHS policy decisions, MCO negotiated rates, SFY 2024 EAPG base rates used in service payments, trends in enrollment, population mix, claim volume, service mix, provider charge increases, and COVID-19 impacts, among other potential changes that may impact reimbursement. This report does not include rate calculations or estimated payment impacts for outpatient services carved out of the EAPG payment methodology (for example, services provided at Critical Access Hospitals).

Appendix A –SFY 2024 Outpatient EAPG Version Update Modeling Summaries

Nebraska EAPG Rate Model
SFY 2024 Medicaid Hospital Rebasement - Outpatient EAPG Modeling Summary
EAPG v3.18 Weight Scaling

EAPG v3.14 Weights		EAPG v3.18 Weights		EAPG v3.18 Weight Scaling - Including EAPG Policy and Provider Adjustments ⁽⁵⁾		Scaled Weight Differences (v3.14 to v3.18)
Discount & Policy Adjustment ^{(4),(5)}		Discount & Policy Adjustment ^{(4),(5)}		Estimated Weight Scaling Factor	Estimated Total Weights After Scaling	Scaling Discount & Policy Adjustment ⁽⁵⁾
A	B	C = A/B	D = B x C	E = A-D		
263,262.71	242,388.09	1.086121	263,262.71	-		

Footnotes and Caveats:

- (1) - Analysis is based on outpatient MCO encounter claims incurred in CY 2021, submitted to the Nebraska Department of Health and Human Services (DHHS) in the fall of 2022 and spring of 2023.
- (2) - Excludes claims without paid plan EAPGs, denied lines, lines without HCPCS codes, lines with Medicare paid amounts, lines with dual eligible categories of aid, and claim lines with Covid-19 fee schedule procedure codes.
- (3) - EAPG v3.14 assignment and relative weights are based on EAPG version 3.14 weights posted on the Nebraska DHHS website and represent 3M national weights, and relies upon accurate reporting by providers and MCOs.
- (4) - EAPG discount adjustments used for weight scaling calculations include policy adjustments for providers and EAPG types.
- (5) - EAPG discount & policy adjustment includes provider policy adjusters and EAPG adjustments for EAPG types 21 or 22, EAPG category 16, EAPG service line 6-Rehabilitation, 36-Chemotherapy and Pharmacotherapy, revenue code 0510, non-emergency services provided in an emergency department, and behavioral health providers. Service adjusters applied to EAPG types 21 and 22 have a value of 0.5. The service adjustment applied to EAPG category 16 is applicable only to eligible behavioral health providers and has a value of 1.02.
- (6) - The service adjuster applied to EAPG service line 6-Rehabilitation EAPG weights is 1.2, with the service adjuster applied to EAPG version 3.18 service line 36-Chemotherapy set at 1.1. These service adjusters are applied to increase weights for EAPGs within these service lines and will not change other payment processing logic. In some cases EAPGs in the Rehabilitation service line will also have the EAPG type 21 service adjuster applied for line payment processing.
- (7) - Rebased EAPG assignment and relative weights are based on EAPG version 3.18 3M national weights, and rely upon accurate reporting by providers and MCOs (in the managed care encounter data). EAPG version 3.18 national weights have been normalized by a factor of approximately 1.08612065 to result in the same sum of modeled weights for services provided under EAPG version 3.14 and EAPG version 3.18.
- (8) - We have not conducted a comprehensive audit of the accuracy of the encounter data; to the extent that there are data quality issues, this may impact the resulting analysis and modeled rates.
- (9) - Actual rebased payments will vary from the estimates in this analysis, based on the final rate methodologies selected by DHHS and Nebraska MCOs, future changes in MCO rate negotiations, enrollment, populations, claim volume, service mix, provider charge increases, the Covid-19 public health emergency, among other potential changes that may impact reimbursement.

Source Notes:

1. Modeled peer groups are calculated to align peer groups between the APR DRG and EAPG payment methodology. SFY 2023 modeled base rates may not reflect base rates paid to out of state providers in SFY 2023.
2. Out-of-State Peer Group information calculated as the average of the peer group base rate for each peer group.
3. SFY 2024 Peer Group Base Rate includes a 3% legislatively appropriated base rate increase. All rate modeling conducted using SFY 2023 base rates with SFY 2024 rate modeling not incorporated into the version update modeling at DHHS' request. All rate modeling was conducted using SFY 2023 base rates, with the SFY 2024 base rates not incorporated into the version update modeling at DHHS' request.

Footnotes and Caveats:

- (1) - Analysis is based on outpatient MCO encounter claims incurred in CY 2021, submitted to the Nebraska Department of Health and Human Services (DHHS) in the fall of 2022.
- (2) - Excludes claims without paid plan EAPGs, denied lines, lines without HCPCS codes, lines with Medicare paid amounts, lines with dual eligible categories of Aid, and claim lines with Covid-19 fee schedule procedure codes.
- (3) - EAPG v3.14 assignment and relative weights are based on EAPG version 3.14 weights posted on the Nebraska DHHS website and represent 3M national weights, and rely upon accurate reporting by providers and MCOs. EAPG v3.14 and EAPG v3.18 visit counts are based on the number of unique visit IDs from EAPG v3.14 and v3.18 grouper output.
- (4) - EAPG discount adjustments used for weight scaling calculations include policy adjustments for providers and EAPG types.
- (5) - EAPG discount & policy adjustment includes provider policy adjusters and EAPG adjustments for EAPG types 21 or 22, EAPG category 16, EAPG service line 6-Rehabilitation, 36-Chemotherapy and Pharmacotherapy, revenue code 0510, non-emergency services provided in an emergency department, and behavioral health providers.
- (6) - The service adjuster applied to EAPG service line 6-Rehabilitation EAPG weights is 1.2, with the service adjuster applied to EAPG version 3.18 service line 36-Chemotherapy set at 1.1. These service adjusters are applied to increase weights for EAPGs within these service lines and will not change other payment processing logic.
- (7) - Rebased EAPG assignment and relative weights are based on EAPG version 3.18 3M national weights, and rely upon accurate reporting by providers and MCOs (in the managed care encounter data). EAPG version 3.18 national weights have been normalized by a factor of approximately 1.08612065 to result in the same sum of modeled weights for services provided under EAPG version 3.14 and EAPG version 3.18.
- (8) - EAPG payment methodology based on Nebraska's EAPG payment calculator posted on the Nebraska Heritage Health Resources website.
- (9) - We have not conducted a comprehensive audit of the accuracy of the encounter data; as such to the extent that there are data quality issues, this may impact the resulting analysis and modeled rates.

Footnotes and Caveats:

- (1) - Analysis is based on outpatient MCO encounter claims incurred in CY 2021, submitted to the Nebraska Department of Health and Human Services (DHHS) in the fall of 2022.
- (2) - Excludes claims without paid plan EAPGs, denied lines, lines without HCPCS codes, lines with Medicare paid amounts, lines with dual eligible categories of Aid, and claim lines with Covid-19 fee schedule procedure codes.
- (3) - EAPG v3.14 assignment and relative weights are based on EAPG version 3.14 weights posted on the Nebraska DHHS website and represent 3M national weights, and rely upon accurate reporting by providers and MCOs. EAPG v3.14 and EAPG v3.18 visit counts are based on the number of unique visit IDs from EAPG v3.14 and v3.18 grouper output.
- (4) - EAPG discount adjustments used for weight scaling calculations include policy adjustments for providers and EAPG types.
- (5) - EAPG discount & policy adjustment includes provider policy adjusters and EAPG adjustments for EAPG types 21 or 22, EAPG category 16, EAPG service line 6-Rehabilitation, 36-Chemotherapy and Pharmacotherapy, revenue code 0510, non-emergency services provided in an emergency department, and behavioral health providers.
- (6) - The service adjuster applied to EAPG service line 6-Rehabilitation EAPG weights is 1.2, with the service adjuster applied to EAPG version 3.18 service line 36-Chemotherapy set at 1.1. These service adjusters are applied to increase weights for EAPGs within these service lines and will not change other payment processing logic.
- (7) - Rebased EAPG assignment and relative weights are based on EAPG version 3.18 3M national weights, and rely upon accurate reporting by providers and MCOs (in the managed care encounter data). EAPG version 3.18 national weights have been normalized by a factor of approximately 1.08612065 to result in the same sum of modeled weights for services provided under EAPG version 3.14 and EAPG version 3.18.
- (8) - EAPG payment methodology based on Nebraska's EAPG payment calculator posted on the Nebraska Heritage Health Resources website.
- (9) - We have not conducted a comprehensive audit of the accuracy of the encounter data; as such to the extent that there are data quality issues, this may impact the resulting analysis and modeled rates.
- (10) - Actual rebased payments will vary from the estimates in this analysis, based on the final rate methodologies selected by DHHS and Nebraska MCOs, future changes in MCO rate negotiations, enrollment, populations, claim volume, service mix, provider charge increases, the Covid-19 public health emergency, among other potential changes that may impact reimbursement.
- (11) - The charge cap applied in the EAPG modeling is based on header level charges for all claim lines prior to EAPG grouping. Charges are inflated by an inflation factor of 1.1177, calculated using the CMS Market Basket data file released on 4/21/2022 and a mid-point to mid-point calculation approach to calculate estimated inflation from the claims dataset time period to the SFY 2024 model period.

Footnotes and Caveats:

- (1) - Analysis is based on outpatient MCO encounter claims incurred in CY 2021, submitted to the Nebraska Department of Health and Human Services (DHHS) in the fall of 2022.
- (2) - Excludes claims without paid plan EAPGs, denied lines, lines without HCPCS codes, lines with Medicare paid amounts, lines with dual eligible categories of Aid, and claim lines with Covid-19 fee schedule procedure codes.
- (3) - EAPG v3.14 assignment and relative weights are based on EAPG version 3.14 weights posted on the Nebraska DHHS website and represent 3M national weights, and rely upon accurate reporting by providers and MCOs. EAPG v3.14 and EAPG v3.18 visit counts are based on the number of unique visit IDs from EAPG v3.14 and v3.18 grouper output.
- (4) - EAPG discount adjustments used for weight scaling calculations include policy adjustments for providers and EAPG types.
- (5) - EAPG discount & policy adjustment includes provider policy adjusters and EAPG adjustments for EAPG types 21 or 22, EAPG category 16, EAPG service line 6-Rehabilitation, 36-Chemotherapy and Pharmacotherapy, revenue code 0510, non-emergency services provided in an emergency department, and behavioral health providers.
- (6) - The service adjuster applied to EAPG service line 6-Rehabilitation EAPG weights is 1.2, with the service adjuster applied to EAPG version 3.18 service line 36-Chemotherapy set at 1.1. These service adjusters are applied to increase weights for EAPGs within these service lines and will not change other payment processing logic.
- (7) - Rebased EAPG assignment and relative weights are based on EAPG version 3.18 3M national weights, and rely upon accurate reporting by providers and MCOs (in the managed care encounter data). EAPG version 3.18 national weights have been normalized by a factor of approximately 1.08612065 to result in the same sum of modeled weights for services provided under EAPG version 3.14 and EAPG version 3.18.
- (8) - EAPG payment methodology based on Nebraska's EAPG payment calculator posted on the Nebraska Heritage Health Resources website.
- (9) - We have not conducted a comprehensive audit of the accuracy of the encounter data; as such to the extent that there are data quality issues, this may impact the resulting analysis and modeled rates.

Footnotes and Caveats:

- (1) - Analysis is based on outpatient MCO encounter claims incurred in CY 2021, submitted to the Nebraska Department of Health and Human Services (DHHS) in the fall of 2022.
- (2) - Excludes claims without paid plan EAPGs, denied lines, lines without HCPCS codes, lines with Medicare paid amounts, lines with dual eligible categories of Aid, and claim lines with Covid-19 fee schedule procedure codes.
- (3) - EAPG v3.14 assignment and relative weights are based on EAPG version 3.14 weights posted on the Nebraska DHHS website and represent 3M national weights, and rely upon accurate reporting by providers and MCOs. EAPG v3.14 and EAPG v3.18 visit counts are based on the number of unique visit IDs from EAPG v3.14 and v3.18 grouper output.
- (4) - EAPG discount adjustments used for weight scaling calculations include policy adjustments for providers and EAPG types.
- (5) - EAPG discount & policy adjustment includes provider policy adjusters and EAPG adjustments for EAPG types 21 or 22, EAPG category 16, EAPG service line 6-Rehabilitation, 36-Chemotherapy and Pharmacotherapy, revenue code 0510, non-emergency services provided in an emergency department, and behavioral health providers.
- (6) - The service adjuster applied to EAPG service line 6-Rehabilitation EAPG weights is 1.2, with the service adjuster applied to EAPG version 3.18 service line 36-Chemotherapy set at 1.1. These service adjusters are applied to increase weights for EAPGs within these service lines and will not change other payment processing logic.
- (7) - Rebased EAPG assignment and relative weights are based on EAPG version 3.18 3M national weights, and rely upon accurate reporting by providers and MCOs (in the managed care encounter data). EAPG version 3.18 national weights have been normalized by a factor of approximately 1.08612065 to result in the same sum of modeled weights for services provided under EAPG version 3.14 and EAPG version 3.18.
- (8) - EAPG payment methodology based on Nebraska's EAPG payment calculator posted on the Nebraska Heritage Health Resources website.
- (9) - We have not conducted a comprehensive audit of the accuracy of the encounter data; as such to the extent that there are data quality issues, this may impact the resulting analysis and modeled rates.

Footnotes and Caveats:

- (1) - Analysis is based on outpatient MCO encounter claims incurred in CY 2021, submitted to the Nebraska Department of Health and Human Services (DHHS) in the fall of 2022.
- (2) - Excludes claims without paid plan EAPGs, denied lines, lines without HCPCS codes, lines with Medicare paid amounts, lines with dual eligible categories of Aid, and claim lines with Covid-19 fee schedule procedure codes.
- (3) - EAPG v3.14 assignment and relative weights are based on EAPG version 3.14 weights posted on the Nebraska DHHS website and represent 3M national weights, and rely upon accurate reporting by providers and MCOs. EAPG v3.14 and EAPG v3.18 visit counts are based on the number of unique visit IDs from EAPG v3.14 and v3.18 grouper output.
- (4) - EAPG discount adjustments used for weight scaling calculations include policy adjustments for providers and EAPG types.
- (5) - EAPG discount & policy adjustment includes provider policy adjusters and EAPG adjustments for EAPG types 21 or 22, EAPG category 16, EAPG service line 6-Rehabilitation, 36-Chemotherapy and Pharmacotherapy, revenue code 0510, non-emergency services provided in an emergency department, and behavioral health providers.
- (6) - The service adjuster applied to EAPG service line 6-Rehabilitation EAPG weights is 1.2, with the service adjuster applied to EAPG version 3.18 service line 36-Chemotherapy set at 1.1. These service adjusters are applied to increase weights for EAPGs within these service lines and will not change other payment processing logic. The EAPG v3.18 Weight and EAPG v3.18 Weight Scaled columns in this table contain have the service line adjustment factors included in these weights.
- (7) - Rebased EAPG assignment and relative weights are based on EAPG version 3.18 3M national weights, and rely upon accurate reporting by providers and MCOs (in the managed care encounter data). EAPG version 3.18 national weights have been normalized by a factor of approximately 1.08612065 to result in the same sum of modeled weights for services provided under EAPG version 3.14 and EAPG version 3.18.

SFY 2024 Medicaid Hospital Rebased - Outpatient EAPG Modeling Summary
EAPG v3.14 and EAPG v3.18 EAPG Weight Comparisons

Table with columns: EAPG v3.18, EAPG v3.18 Description, EAPG v3.14, EAPG v3.14 Description, v3.18 EAPG Type, v3.14 EAPG Type, v3.18 EAPG Category, v3.14 EAPG Category, v3.18 EAPG Service Line, EAPG v3.14 Weight, EAPG v3.18 Weight Before Scaling, EAPG v3.18 Weight Scaled, Difference in v3.14 to v3.18 Scaled Weights, Detail Line, Simulated EAPG Payment, EAPG Payment, Simulated EAPG Payment, Est. Change, Est. Payment. Rows list various medical procedures and their associated weights and payments.

Footnotes and Caveats:
(1) - Analysis is based on outpatient MCO encounter claims incurred in CY 2021, submitted to the Nebraska Department of Health and Human Services (DHHS) in the fall of 2022.
(2) - Excludes claims without paid plan EAPG, denied lines, lines without NDCS codes, lines with Medicare paid amounts, lines with dual eligible categories of Aa, and claim lines with Covid-19 fee schedule procedure codes.
(3) - EAPG v3.14 assignment and relative weights are based on EAPG version 3.14 weights posted on the Nebraska DHHS website and represent 3M national weights, and rely upon accurate reporting by providers and MCOs. EAPG v3.14 and EAPG v3.18 visit counts are based on the number of unique visit IDs from EAPG v3.14 and v3.18 grouper output.
(4) - EAPG discount adjustments used for weight scaling calculations include policy adjustments for providers and EAPG types.
(5) - EAPG discount & policy adjustment includes provider policy adjusters and EAPG adjustments for EAPG types 21 or 22, EAPG category 16, EAPG service line 6-Rehabilitation, 36-Chemotherapy and Pharmacotherapy, revenue code 0510, non-emergency services provided in an emergency department, and behavioral health providers.
(6) - The service adjuster applied to EAPG service line 6-Rehabilitation EAPG weights is 1.2, with the service adjuster applied to EAPG version 3.18 service line 36-Chemotherapy set at 1.1. These service adjusters are applied to increase weights for EAPGs within these service lines and will not change other payment processing logic. Both EAPG v3.18 weight columns in this table contain have the service line adjustment factors included in these weights.
(7) - Rebased EAPG assignment and relative weights are based on EAPG version 3.18 3M national weights, and rely upon accurate reporting by providers and MCOs (in the managed care encounter data). EAPG version 3.18 national weights have been normalized by a factor of approximately 1.08612065 to result in the same sum of modeled weights for services provided under EAPG version 3.14 and EAPG version 3.18.
